## login module just like on bestofjoomla

Posted by mailalon - 2007/05/06 11:17

---

Can you release this module to the public ?

I tried that module last night and the Flex login doesnt display a avatar ?

so i dont think FB use that as there login above right?

Yes which login module is actually being used? I know the CB login can display an avator as well as the joomlahacks login module for the smf bridge.

Who said it was being released? From a developer standpoint I understand that there are somethings you need to keep for yourself.
