## FireBoard 1.0.4 released - upgrade now

Posted by danielalt - 2007/12/24 18:17

---

Best of Joomla is proud to announce FireBoard 1.0.4. The whole FireBoard Team took the opportunity to put together a brand new present to go under the Christmas tree. New forces joined us and another push of motivation brought us into a new era of "Boarding with Fire".

We say thank you to all driving participants of this huge effort. All active community members and the FireBoard team had a hand in getting us to where we are now.

New Features like double post suppression, a now perfectly working NEW indicator, avoided double page load and more, complete this release.

With this release being primarily a security and bug fix release, several vulnerabilities have been resolved. FireBoard 1.0.4 is the only release you should use in production environments and therefore is a must to upgrade.

An incredible amount of bugs have been fixed. Simply too many to even give you an idea about all the work that been done. Start the new year right! Check it out!
