
embedded video in 1.0.4

Posted by racoon - 2007/12/30 03:09

Hi,

I know there exists other solutions, but I decided to make an additional contribution for embedded videos for youtube, google, clipfish and myvideo.

Enjoy :)

http://www.bestofjoomla.com/images/fbfiles/files/video_tag.txt

current version (2008.03.01):

http://www.bestofjoomla.com/images/fbfiles/files/fireboard_video_addon-92e58e881af41cb616900d95103ef1a7.zip

video providers:

animeepisodes, biku, bofunk, break, clip.vn, clipfish, clipshack, collegehumor, current, dailymotion, downloadfestival, fliptrack, gametrailers, gamevideos, glumbert, gmx, google, googlyfoogly, ifilm, jumpcut, kewego, liveleak, livevideo, megavideo, metacafe, mofile, multiply, myspace, myvideo, quxiu, revver, sevenload, sharkle, spikedhumor, stickam, streetfire, stupidvideos, toufee, tudou, unf-unf, uume, veoh, videoclipsdump, videojug, videotube, vidiac, vidilife, vimeo, wanyou, web.de, video.fr, youku and youtube

video players:

divx, flash, mediaplayer, quicktime and realpayer

Re:embedded video in 1.0.4

Damm you are awesome man.. One more Request.. Is there a way to Embed videos from crunchyroll my friend said it's

impossible cause they are not public or something but i go to there site and I can view the vids without registering. So since you figured the ones I requested.. will that be possible?

=====

And if you can't cant with crunchyroll it's okay... Is there also a way to embed your own video from your own server I guess from your local Server ie. FLash video, swf, divx video, wmv, rmv, mpg(4) etc. Pretty much how Allvideos plugins does... I think you code is way better cause You can actually view the Vids even when you are a Guest. Which is a Plus. Thanks for your time in Helping me. I bet this Thread will be a hit for other Fireboard Users.. I tell you right now .. You are AWESOME!!! Keep up the good work.

HI great addon, only; I get an cannot load page error and the page goes blank.

Also have a question/request; How can we put an BBcode button in the add post page for this?

Regards and keep up the good work!

Matt

Sorry, crunchyroll does not want to work - it sets a cookie and counts anonymous access to the videos until a limit is reached.

But I have good news: MediaPlayer, RealPlayer, DivX and QuickTime are now supported... at the moment I optimized the code. So I think I will release the updated code tomorrow :)

miki55 wrote:

When did you get a load page error?

In one of the next releases I will try to make a bbcode button... hope so :laugh:

Here comes the new release :laugh:

http://www.bestofjoomla.com/images/fbfiles/files/video_tag-0c4e655b80ec0837cee26fbbf9d87ad3.txt

I've forgotten something... :blush:

find following lines in the same file:

```
case 'email':
case 'url':
case 'thread':
case 'post':
case 'quote':
case 'img':
case 'file':
    $task->autolink_disable++; # stop autolink conversion
    return TAGPARSER_RET_NOTHING;
    break;
```

and insert following line after "case 'file':":

```
case 'video':
```

following video providers are now supported:

AnimeEpisodes

Biku

Bofunk

Break

Clipfish

Collegehumor
Current
Dailymotion
Fliptrack
Gametrailers
GMX
Google
IFilm
Jumpcut
LiveLeak
MegaVideo
Metacafe
Mofile
MySpace
MyVideo
Quxiu
Revver
Sevenload
Stage6
Stickam
Streetfire
Tudou
Uume
Veoh
Vidiac
Vimeo
WangYou
WEB.DE
YouTube

and following video players:

DivX
FlashPlayer
MediaPlayer
QuickTime
RealPlayer

Re:embedded video in 1.0.4

Posted by mickscool - 2008/01/02 22:25

Hi,

Looks to be a great solution. I migrated to 1.0.4 (10-12 days back) but since I could not find any video embedding option, I moved back to 1.0.3 as I already have the smile.class.php hack and my BBCode has youtube, googlevideo etc tags.

I think, it would be really good if you can add on how to modify BBCode buttons to this stuff and it will make it this stuff complete.

Thanks for the great work...

Element926 wrote:
Blip.tv!!

hmm, I can't find any solutions to use a video ID for this provider.
But... you can use blib.tv with the current version of this addon :)

Go to blib.tv, select a video, click on "email or embed this video",
then click on "embed" and "copy embed code" to the clipboard. You need
the URL inside the data="" tag. Insert this URL inside this:

<http://blip.tv/scripts/flash/showplayer.swf?...>

that's all... and don't forget to make the additional small modification:

http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,36464/catid,68/limit,10/limitstart,20/#36979

Re:embedded video in 1.0.4

Posted by Golf Girl - 2008/01/03 21:01

I've installed this hack with success. The only thing that I'm disappointed with is, if I type text before and text after the 'embed' code, even if I leave space between the text and the code (ie blank lines) the text runs right up against the video embed which looks pretty crap. Is there any way to avoid this?

Sorry I can't reproduce it here because it seems video embedding is not allowed :(

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/05 00:33

New release with following additional features:

- GameVideos
- Zero Punctuation (videos hosted by videoegg.com, see below)
- FlashVars (see textfile)
- dropdown menu in the posting area

http://www.bestofjoomla.com/images/fbfiles/files/video_tag-d9342c29dba1b9363345eacbac3861e2.txt

how to use Zero Punctuation:

- 1) select video on the Zero Punctuation homepage
- 2) look at the suggested embed code and search the string that is startet with gc=
- 3) use the bbcode below

<http://update.videoegg.com/flash/proxy.swf?jsver=1.4>

Re:embedded video in 1.0.4

Posted by mickscool - 2008/01/05 00:43

Hi Racoon,

Thanks for the great work. Can you please explain, what you mean by this:

-dropdown menu in the posting area

Do you mean,when a user posts a new thread, he will get a combox box with all the video modes supported and he can click any one of them,and the tags for that video mode would appear in the thread body??

Just want to confirm, before i upgrade to Fireboard 1.0.4 and apply this mod.

Thanks

=====

Hi thanks for this great app. Any chance of getting support for PhotoBucket? Also, can I somehow add a little film icon in post that have video content?

Thanks again, Great Work!

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/12 04:08

Thanks :)

You can use PhotoBucket, if you use the following example bbcode:

`http://i7.photobucket.com/player.swf?file=http://vid7.photobucket.com/albums/y279/dalilgriffin/zotherz/xmas07026.flv&sr=1`

Go to the video, look at the embed-code and copy&paste the "src" part into the example.

Direct support seems not to be possible, because there are too many different parameters.

=====

Re:embedded video in 1.0.4

Posted by photolodge - 2008/01/12 04:10

Wow, your the greatest..... THANKS!

Any word on can adding a little film icon in post that have video content?

Know what I mean?

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/12 04:31

Do you mean showing a icon in the thread list?

hmm, this is very difficult, because this is not an attachment :unsure:

EDIT: or do you mean to manual add this symbol as a topic icon?

=====

Re:embedded video in 1.0.4

Posted by fxstein - 2008/01/12 05:49

I have an idea - but that has to wait for now... B)

after the bugs are fixed.....

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/12 06:39

I'm curious about it.. B)

=====

Re:embedded video in 1.0.4

Posted by photolodge - 2008/01/12 16:23

Hi

Here is what I was talking about.

Instead of the folder icon when video is posted, put a icon of slice of film or movie camera here.

=====

Re:embedded video in 1.0.4

Posted by photolodge - 2008/01/12 16:30

photo
<http://www.bestofjoomla.com/images/fbfiles/images/thread.jpg>

Found a bug while posting last message.
Photo exceeded 50k so rejected it. went back to edit it an would not allow for reupload, so I had to post this one.

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/13 00:52

hmm... this could be a nice feature :)

or in the second column: this icon can be selected in the message editor

=====

Re:embedded video in 1.0.4

Posted by goodman - 2008/01/18 12:36

thanks for the addon. i installed according to the instruction. but it does not work, what i typed on the forum was still shown the same way, no video was shown. for instance, i typed xE17ekLjLS and still the same thing came out. after the installation, the provider dropdown (video) came also. any help would be highly appreciated.

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/18 18:46

This problem appears, if

1. the content of "code 1.txt" was not inserted into file interpreter.fireboard.inc.php
2. the input of the bbcode was incorrect

hmmm... please look your pms :)

=====

Re:embedded video in 1.0.4

Re:embedded video in 1.0.4

Posted by pancho91 - 2008/01/19 18:00

I now this question should look like very stupid..

but...

HOW DO I INSTALL THIS EXTENSION??????¿?¿

bye :D

Re:embedded video in 1.0.4

Posted by grumblemarc - 2008/01/19 18:02

It's NOT an extension. It does not install. Where does it say that? You have to hack or modify some key files by following the instructions TO THE LETTER!

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/19 18:28

pancho91 wrote:

HOW DO I INSTALL THIS EXTENSION??????¿?¿

Look in this thread, some pages ago... ;)

http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,39760/catid,68/limit,10/limitstart,70/#38830

Yep, Marc is right, this is a hack and therefore read careful the manual inside the zipfile.

Re:embedded video in 1.0.4

Posted by pancho91 - 2008/01/19 20:30

thank you all...

but this kind of question wouldnt be if the updates are updated in the first message to...

so people doesnt have to read all pages just for a code and some instructions..

bye ;D

Re:embedded video in 1.0.4

Posted by grumblemarc - 2008/01/19 20:45

Sorry you had to actually read.

Re:embedded video in 1.0.4

Posted by photolodge - 2008/01/19 21:28

I did it by reading... maybe you should read too. Especially if you don't understand the basics.

Please remember that all the contributors here like raccoon, give you this code as a gift.
Please save your negative comments for paid support programs.

Just for the record, I do appreciate all that these developers provide. THANK YOU!

Re:embedded video in 1.0.4

Posted by goodman - 2008/01/19 22:14

great, racoon, thanks!

Re:embedded video in 1.0.4

Posted by goodman - 2008/01/19 22:18

lets see if i am making any sense:

1. Racoon's hack can be used to play files from the providers and also any file from any website (just use http://...),
 2. allvideos plugin can only be used to play files specified by the providers (such as youtube), and for instance, it can not be used to play a swf file hosted by a site that is not in their provider list

You are so spot on! Thats exactly how it feels around here at times.

After nights of fixing bugs you get a: "What? You couldn't document it better?"

Anyway thx to racoon's dedicated help we have fixed several more bugs this week AND included the video code. So going forward you won't need this hack any longer.

Posted by nanaya - 2008/01/24 11:23

Thanks Racoon!!!! Pretty Sure it will work. Never Failed Yet. *knock on wood. I'm gonna try now. Woohoo.. Multiply.com AWESOME!!!

=====

Re:embedded video in 1.0.4

Posted by nanaya - 2008/01/24 11:43

Hmm.. Okay I spoke too soon.. Looks like it's not adding the code when i choose a provider in the Boardcode. It doesn't paste on the msg the code. .. Try do a test racoon. here's my test page for it.

http://thisiskawaii.com//index.php?option=com_fireboard&Itemid=73&func=view&catid=135&id=3332#3332

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/24 12:51

it looks good... all videos are working

=====

Re:embedded video in 1.0.4

Posted by nanaya - 2008/01/24 16:27

It shows.. cause that's already been there.. I mean when I make a new post and I used the Video Embed in the Boardcode.. it's not Pasting it on the Message Box when I select the Video Provider in the Board Code.
UPDATE: Racoon I think it's the second code . the one you have to add in the smile.class.php .. Seems like it's not posting the code in the message box when you select the video provider in the Boardcode. I used the code before this update. and just added Multiply in it. works now in the message box. Only problem the is not Showing the Video. It gives me a "There were no videos found" I made a Example in this link.
http://thisiskawaii.com//index.php?option=com_fireboard&Itemid=73&func=view&catid=135&id=3546#3546
Just scroll to the bottom. Thanks.

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/24 22:06

Yes, you are right... I forgot something, sorry :)

The correct code2 is attached here:

http://www.bestofjoomla.com/images/fbfiles/files/code_2.txt

nanaya wrote:

That was a Multiply video post.

Your Updated Code:

http://uetoaya.multiply.com/video/item/183/Ueto_Aya_-_Haneru_no_Tobira_-_Kawaii

:laugh: Okay... it should be like this:

uetoaya:video:183

The videocode of Multiply is a little complex and consists of 3 parts. In the provider.pdf I describe for every provider, how to get the videocodes. I hope you get along with this. ;)

notice:

- the auto detection for Multiply URLs is not supported yet

- to activate the auto detection, use: url (without type)

Posted by nanaya - 2008/01/28 05:56

Many Thanks Racoon again. Lovin' it.

=====

Re:embedded video in 1.0.4

Posted by CWS - 2008/01/30 12:27

Hmm. I did exactly what was in the install instructions and nothing worked. I don't get errors or anything in the post.

Do I have to add the BBCode into some file to get it to work first? or what's the deal.

I know you used 1Gi15H9eE-A as an example and I understand 1Gi15H9eE-A would be the (in bold)
<http://youtube.com/watch?v=FJ2UzCZiKgU> but for some reason it just doesn't like to work for me, unless I'm doing something wrong.

=====

Re:embedded video in 1.0.4

Posted by grumblemarc - 2008/01/30 14:48

You're doing something wrong.

=====

Re:embedded video in 1.0.4

Posted by as510 - 2008/01/30 18:34

Hi,

I recently set up a website and would like an extension that can manage my videos. These videos will be hosting from my server. Can this program work?

I apologize for the novice question. Technology has always confused me.

Thanks,
Linda.

=====

Re:embedded video in 1.0.4

Posted by grumblemarc - 2008/01/30 19:09

FireBoard does not manage videos. This is a FORUM component.

=====

Re:embedded video in 1.0.4

Posted by nanaya - 2008/01/31 01:33

First of all thank you racoon for contributing this code. Awesome Job!!!

Okay. I notice something . When when you choose the first video provider "AnimeEpisodes" from the Boardcode .. It won't paste the code on the Message Box. Only when you Choose anything provider below it it will paste. So if I choose the "Anime Episodes" I have to choose "biku" or any provider, it will paste then Choose "AnimeEpisodes" then delete biku cause I'm not picking that the first time. Sorry if it's confusing.. To get to the point, Can you add on the first menu in the Video boardcode "Video Providers" or something so when I click on the first Provider it will paste the code on the message window. Also same thing you doing on the Map code. You can't choose Google maps right away you have to choose Map 24 first.

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/31 04:32

CWS wrote:

Do I have to add the BBCode into some file to get it to work first? or what's the deal.

The BBCode will be insert inside the message like the other BBCodes.

Or do you want to know where to put the files code1 and code2? :huh:

I think this is not a issue of this extension... maybe it could be a problem in the css of your template or something else.

You were correct that it was not with the extension nor did I think it was either. Turned out that it was because I was creating a 'how to' for my forum visitors and I had used the BBC code to show an example of what their post would look like as they were writing it. When I inserted

of what the BBC would look like for the video
prior to the actual BBC code used to display the video then I got the result that I originally posted.

It really is a trivial thing that may very be related to my theme but it's here now just in case anyone else runs into it.

=====

Re:embedded video in 1.0.4

Posted by racoon - 2008/01/31 12:22

okay... do you use the code-tag? and after this there are no carriage return?

=====

Re:embedded video in 1.0.4

Posted by Nevermore - 2008/01/31 18:34

Yep. Using the the code tag prior to inserting the video code would produce this in the post regardless of carriage returns:

some decriptive text
ID tag
some more text

When what I wanted and got without using the code prior to inserting the video code was this:

some decriptive text

ID tag

some more text

I have no idea why the carriage returns were ignored but I justed to share in case anyone else runs into an odd
formatting issue like this.

Re:embedded video in 1.0.4

Posted by cuteolenpho - 2008/02/07 18:44

They work okie,

Simply wrap your HTML or javascript sections between {htmlfix} and {/htmlfix} tags directly in the wysiwig editor. When the document is displayed, the mambot decodes the HTML entities introduced by the editor so the code will work again.

If the display looks wrong, refresh (F5) the view again.

Re:embedded video in 1.0.4

Posted by racoon - 2008/02/16 19:48

it looks good... can you tell me what is not working?

=====

Re:embedded video in 1.0.4

Posted by Jing - 2008/02/17 05:40

Sorry... Edited my post. I found the problem and it was just my negligence...now running great! hehe :D
Thanks man..nice work! ;)

=====

Re:embedded video in 1.0.4

Posted by Jing - 2008/02/21 12:51

Sorry.. thought its working but it was not... I successfully installed everything, the drop down menu shows up but the problem is when the link is submitted, the video does not show-up... it just shows a blank page. Not even the video link shows up...

what could be missing here? :(

=====

Re:embedded video in 1.0.4

Posted by shadowless - 2008/02/25 15:17

Image resizing not working in forum.

For example, i write this code,
blabla.jpg

but in forum i have the image with original size. You can see it here:

http://noxco.org/index1.php?option=com_fireboard&Itemid=103&func=view&catid=19&id=28#28

Do you can edit my file for me?

=====

Re:embedded video in 1.0.4

Posted by ravenx25 - 2008/02/27 07:07

OK i got this program to work with no install issues, however... the drop down for video players is confusing me.

I click on the drop down box for example for (Veoh)

But the code does not go in to the forum.

the only code that actually works is the

Video button

How in the heck do i get the drop down to put the codes in to my forum?

is there more to just clicking on it?

Thank you. and this hack has to be the best video player hands down.

it would be even better if you could get youku.com and 56.com videos to work with it

=====

Re:embedded video in 1.0.4

Posted by ravenx25 - 2008/02/27 07:08

Oh and the is this actually working yet ?

=====

Re:embedded video in 1.0.4

Re:embedded video in 1.0.4

Posted by gurbir - 2008/02/28 07:31

Hi racoon,

Can you tell me on onething, When we embed videos from veoh, does it play the full length movie or just a 5 min preview?

Thnx

=====

Re:embedded video in 1.0.4

Posted by ravenx25 - 2008/02/28 08:52

Hi gurbir it will depend on the veoh video itself, If it is a 5min veoh video on the main veoh site then it will be 5min on your forum

however if it is a full video and Not a 5 min preview, then it will play the full version on your forum.

Posted by martialedge - 2008/02/29 03:12

Ok firstly many thanks to the developer for this add-on, great help to the joomla FB community.

I have one request if possible...

Basically on our site Martial Edge (www.martialedge.net/forum) we get members inserting video all the time (99% use youtube), however not many of the members know how to use tags, and furthermore, many of them don't actually know where to find the ID (eg the bit after v=) of the youtube video (often youtube make this confusing to find).

My request is...

Is there a way to do one of the following:

1) - (the best way!)

Make it so that any reference to a youtube link where its pasted in as the full URL (eg:

<http://www.youtube.com/watch?v=aM5yuy-o9HQ>) *automatically* convert this into an embedded video?

2) (an alternative if 1 is too hard)

Make it so that this add on allows users to enter the *full URL* into the youtube video tag , for example the tag would look

like: <http://www.youtube.com/watch?v=aM5yuy-o9HQ>

Look forward to hearing your thoughts.

Hmmm.. That Actually works on mine martialedge.. really don't know why yours does work.. Im using the Default Template of Fireboard.. could that be the reason?

Re:embedded video in 1.0.4

Posted by martialedge - 2008/02/29 17:29

Nanaya,

No i totally see your point. To most comuter users its pretty easy to find, but a *lot* of people struggle with this on our site. The reason is sometimes (unfortunately I dont have any example) the youtube URLS have characters AFTER the code to eg <http://.....code...?yugygqw67w78g78g> etc.. making it hard to pick out for anyone not clued up in computing.

It would also be very very usefull to have this done automatically when they post any youtube URL (as some noob forum users dont even use tags so would be nice to have this automatically converted, for youtube only at least anyway).

Any thoughts?

Re:embedded video in 1.0.4

Posted by nanaya - 2008/02/29 17:58

Well.. I can see what you mean.. but if your members really serious on posting stuff then they should Read the Thread of Posting Videos. It's really not that hard to post the videos. As for the Extra Characters... anything after the equal "=" no matter how long it is.. will work. Maybe Add a Video on the Thread on how to Embed YouTube Videos in your Thread.. or do a Screen Cap with Directions would help too... As far as finding out another way... Thats Really racoons department.. He really did an awesome job in this.. Man This is really the best Video Embed code I've seen. Big Props to Racoon. Sorry.. I'm also a noob in here.. hehe.. Do you have mods in your Thread that can help you teach new members on how to post stuff? I appoint a good number of mods just to fill the time slots when other mods aren't there. Well um good luck though.. I don't know if I'm any help in here... but you have a cool site too. :)

Re:embedded video in 1.0.4

Posted by snilloconator - 2008/02/29 19:11

Hey this hack looks very promising and I would like to implement into my boards. But I'm having trouble deciding which version to download? I have seen many updates and patches to the updates. So is there any chance you could post a latest/complete. Also after reading I did not see any support for <http://www.leettube.com/>. We are a gaming community and this would be cool to have this in the mix as well! Thanks and very nice work from what I have seen browsing other sites w/ this hack!!!!!!;)

Re:embedded video in 1.0.4

Posted by racoon - 2008/03/01 00:41

Fireboard 1.0.4 Video AddOn (2008.02.29)

changes:

- additional video providers supported: stupidvideos.com, youku.com
- some minor fixes

http://www.bestofjoomla.com/images/fbfiles/files/fireboard_video_addon-b4aa8ec45c3d8b99db4cd64e5c6be074.zip

Have fun! B)

Re:embedded video in 1.0.4

Posted by racoon - 2008/03/01 01:27

ravenx25 wrote:

it would be even better if you could get youku.com and 56.com videos to work with it
youku.com is now supported, but no chance for 56.com, because there are too many parameters to handle. Use
following example instead:

http://www.56.com/n_v19_/c33_/6_/7_/tiantangfilm_/zhajm_120427655730_/246000_/0_/29945455.swf

You can find the flash url by clicking on the share button (is this correct? I can't speak Chinese :silly:)

FYI: you can remove Stage6.com from your list of players in your next update

Thanks for the info. But because Stage6 is still available I decided to support it furthermore until it will be closed.

snilloconator wrote:

I did not see any support for <http://www.leettube.com/>. We are a gaming community and this would be cool to have this in
the mix as well!

Sorry, the addon can't support it directly, because I don't know, how to get the flv-file by using the video-id number. But
don't be scared :laugh: , use this:

<http://www.leettube.com/agriyaplayer.swf?config=http://www.leettube.com/playerXml.php?viewkey=08964bf9f24b15f0e490&themes=http://www.leettube.com/themes.xml&flv=http://www.leettube.com/flvideo/345.flv&autostart=true&showfsbutton=true>

You can find the needed code in the embed info container: src="..."

Re:embedded video in 1.0.4

Posted by nanaya - 2008/03/01 02:05

Thanks For the Update Racoon.. I will test this out as usual. This is by the far the best thing that Happened to Fireboard.
:P

Re:embedded video in 1.0.4

Posted by ravenx25 - 2008/03/01 02:13

Thank you for the update!

I dont speak chinese either i will just play around with it untill i find it..

using the is it possible to take videos from other sources not in your list?
AOL or MSN for example ?

Hmm I asked that Question before.. just waiting for the Man Racoon post it if it's Possible.

Re:embedded video in 1.0.4

Posted by MisterMike - 2008/03/11 01:38

This seems like an incredible bonus- thanks for all the hard work.

I have a problem though, and that is the absence of the interpreter.fireboard.inc.php file.

I've looked in the com_fireboard sources folder, both in the main components folder and the admin folder. It's definately not there.

Can I find the required php file on its own and upload it? Or will I need to reinstall fireboard (which in all other aspects seems to be working just fine).

Thanks in advance for the help.

Mike http://www.bestofjoomla.com/images/fbfiles/images/fireboard_remote.gif

Re:embedded video in 1.0.4

Any idea if you can put in the codes for rutube and supernovatube ?

rutube: okay, it's supported in the next version ;)

supernovatube: no way to use the video code, so look in the embed code by clicking on the button beside of the zoom button and use the following example code:

<http://video.supernovatube.com/FlowPlayerDark.swf?config=%7Bembedded%3Atrue%2CinitialScale%3A%27orig%27%2CbaseURL%3A%27http%3A%2F%2Fvideo%2Esupernovatube%2Ecom%27%2CvideoFile%3A%27%2Fdl%2Fc66d418f4>

Re:embedded video in 1.0.4

Posted by gurbir - 2008/03/21 03:05

Is it possible to embed the full length videos like this : <http://www.veoh.com/videos/v63099248z72pcdR> ?
So that we dont have to use Veoh TV :blush:

Re:embedded video in 1.0.4

Posted by racoon - 2008/03/21 07:35

:laugh:

okay... now I saw the "full video" button ;)

But I didn't see a way to find out what file was streamed by the Veoh Player.
I think this is a .flv file. If someone can find it out, please let me know.

I have a problem though, and that is the absence of the interpreter.fireboard.inc.php file.

I've looked in the com_fireboard sources folder, both in the main components folder and the admin folder. It's definately not there.

FireBoard before 1.0.4 don't have this file ;)

Thanks for that Racoon- I upgraded to 1.0.4 and everything's working fantastic. Sorry for not responding sooner but I've been unable to get into the site cos Dreamhost's gone AWOL on me.

As I say, I can now embed videos fine, so thanks. Only problem now is that the Joomla stylesheet mod I made to make Fireboard's text entry box any bigger than a postage stamp worked fine in 1.0.3 but not in the new version... ah well... back to the CSS.

Thanks though- this is great.

Mike

As for the problem with not finding the "interpreter.fireboard.inc.php" I couldnt find it ether with my crappy ftp program, (cyber duck, mac osx) but i changed and am using a mac version of filezilla so it displayed in that program. That might be your problem.

Re:embedded video in 1.0.4

Posted by noskillsskate - 2008/04/03 03:32

Now i hope i helped someone, now please can you help me! lol

I have inserted the code correctly in "interpreter.fireboard.inc.php" and the Smile file, but i still only get the link in the Video tags

I am testing it with a youtube video and its not working

Here is the link to the test thread

http://www.spooledupaz.com/component/option,com_fireboard/Itemid,35/func,view/catid,20/id,2759/#2759

I am using the Joomla template shock trooper from rocket theme and using the FB template Gated Community.

<http://www.bestofjoomla.com/images/fbfiles/files/interpreter-1ff110aff3102906aa67c9dc9bf4ad5.zip>

Any ideas?

Do i need a plugin for FB or the all videos plugin? or a mambot enabled?

if you use autodetection by using the URL, don't use "type"...

eg: <http://www.youtube.com/watch?v=fPJzhTi47LE>

and... please use the latest version ;) you can see it in the first post of this thread!

<http://www.bestofjoomla.com/images/fbfiles/files/interpreter-1ff110aff3102906aa67c9dc9fbf4ad5.zip>

Any ideas?

Do i need a plugin for FB or the all videos plugin? or a mambot enabled?

no plugin or mambot is needed

I use successfully your interpreter.fireboard.inc.php... the only thing you forgot is step 3 in the install.pdf manual.

I use fireboard, 1.0.4 the most recent version.

So heres what i have done:

Ive double checked the source code.
Tried various forum post video codes.
Defaulted my joomla template.
Defaulted my fireboard template.

Im stuck as to why it will not display. Is there a setting in fireboard im missing?

Ive attached the source code. Hope you can help.

@noskillsskate

I checked your files with mine files and they look very different, I use version 1.0.4 of fireboard. Are you sure you use the same version??

I have added my files so you can compare them also. <http://www.bestofjoomla.com/images/fbfiles/files/mine.zip>

Hey racoon thanks it works now for some reason but what i did was i replaced my files with your files and it decided to to work. Wierd. But i am using the latest fireboard (well thats what it says) 1.0.4 and im using php 4.

Maybe when i updated, it didnt update those files, who knows. But it works now and thank you for everything!

Re:embedded video in 1.0.4

Posted by infoweb - 2008/05/08 20:39

Hi Racoon,

Firstly I want to tell you I think you've done an AWESOME job with this, and Thank you for giving so much...

I've used the hack and it works gr8!

Now I'm trying to get it to work with screencast.com and being a bit of a newbie not to sure how to implement their code.

I can get it to work but for some reason it takes a really long time for the video to show - almost as if it's trying to preload the whole video before it will show the video.

Screencast doesn't normally do this, they have a thumb image which usually displays in seconds then only starts loading once some click on the video.

any chance you could take a look at the screencast.com code I attached for embedding a video and see if it can be worked into your awesome hack?

I'd love to see is this can be done

Thanks again

Mark http://www.bestofjoomla.com/images/fbfiles/files/fireboard_screencast_video.txt

Re:embedded video in 1.0.4

Posted by infoweb - 2008/05/08 22:40

Hi Guys,

Ok, got it working, added some code to the code 1 and code 2 files to support screencast.com

a little messy but it works :)

Mark

Hi, great plugin/hack/addon :)

The only thing i didn't figure it out is how to embed local (flash) .flv file. Is that possible?

Thx

Re:embedded video in 1.0.4

Posted by fxstein - 2008/06/25 04:01

Racoon,

Hope you are doing fine.

Could you do me a favor and check if what is in the SVN is the latest code for the embedded videos? If not, would you mind supplying a new set of files for me (hopefully based off the latest SVN B)).

I am about to pull a release candidate for 1.0.5 that will include this feature as part of the full release.

Thx!

Oliver

I think so... it should be works with the flash applet called flvplayer.swf. Get this applet and upload it on you server.

use the following bb-code:

`http://your.site/flvplayer.swf?video=http://your.site/your-file.flv`

but I can't confirm, that it works... i didn't test it :whistle:

Re:embedded video in 1.0.4

Posted by Flappers - 2008/09/02 06:16

Hello everyone. Please forgive my ignorance, but I really am trying, and am struggling to get to grips with it all :blush:

I was directed here by a kind soul on another Joomla forum in response to this query :

"I'm trying to upload an addon that will allow users of the Forum to paste a YouTube link into their post & when saved it streams the Video directly to the page - rather than just leave a link - once you hit play. We're using Version 1.0.4. I have tried to upload Easytube with no success, I'm being asked for a setup file as I begin the upload process through the JCE Plug-in option. Any help would be much appreciated."

I have downloaded the Zip file & opened the PDF, this is where I got stuck ... I can't find where to paste the code to. I can find /components/fireboard, but no source.

A couple Screens if it helps:

<http://i142.photobucket.com/albums/r88/FlappersMkipp/123-2.jpg>

<http://i142.photobucket.com/albums/r88/FlappersMkipp/1234.jpg>

Can anyone offer any support please, all we want to do is be able to link YouTube properly :S

=====

Re:embedded video in 1.0.4

Posted by fxstein - 2008/09/02 06:35

You could simply upgrade to 1.0.5RC1 - It has the video functionality built in including youtube auto linking.

That way you don't have to mess with files.

=====

Re:embedded video in 1.0.4

Posted by hidemike - 2008/11/25 17:20

hey multiply video is not playing like this

ki9olp:13

when you click play button, nothing happens:(

and also how do i change the size on every video i want to have a fixed width=600, height=400 size.

=====

Re:embedded video in 1.0.4

Posted by blueagle1829 - 2008/12/02 02:28

If you make sure that in your Fireboard Configuration you have Joomla Mambot Support ENABLED then you will be able to still use the All Videos Plugin and embed anything you want that way. This doesn't seem to be true for the flvremote feature. That being said- you can use the below code for remotely hosted FLV files.

`http://www.YOURWEBSITE.com/mambots/content/plugin_jw_allvideos/jw_allvideos_player.swf?file=http://REMOTEHOSTINGSITE/folder/video.flv`

=====
