
Upgraded 1.04 from 1.03 : ERROR

Posted by sunnyjey - 2008/01/06 13:09

I had successfully upgraded to 1.04 from 1.03 yesterday.

I could see 1.04 stable version in backend. Now today my frontend is completely wiped out with following message

Serious db problem:Unknown column 'fbviewtype' in 'field list' SQL=select fbviewtype from jos_comprofiler where user_id='62'

Please help me...My forum is completely down..

That's a Community Builder error not a FireBoard one.
