
FireMessage and JIM migration path

Posted by grmi64 - 2008/01/11 11:43

I'm not sure where to post this so I'll ask here - does anyone know if there is a plan to have a migration path from the popular JIM PMS to FireMessage? It would be great if there was a database converter so users of JIM can easily migrate. If FireMessage is going to be based on Clexus (and even better?), then this will be a great addition!

Thanks,

-Greg

According to the 'About Firemessage' post, it's clearly going to be based on Clexus PM which ofcourse is great. The 'smart import' mentioned includes uddelM and MYPMS by as I too use JIM, count a +1 in including it please :D

What I don't understand is why there is a 'Download Now' image linked to a blank page...anyway, February is getting close!

FYI,

Just in case they don't offer a JIM -> Firemessage migration option you can always do the following:

- 1) Migrate JIM -> uddelM (uddelM allows import of JIM message, and it works well)
 - 2) Migrate uddelM -> Firemessage (assuming they follow through with the uddelM 'smart import' option)
-
