## how to be able to post in arabic / read please

Posted by muhanad - 2008/01/13 04:14

---

to be able to post in arabic you should do the following

1-make sure your database collation is utf\_unicode... ( having this collation is so important if you want your website to support different languages other than english)

2- now you should edit your template index.php  
locate this line

and change it to

now you have your template supporting different languages

3- go to fireboard language folder and open english.php using notepad  
save this file as encoding utf-8

try adding new post in arabic now and u should be fine!
