
phpbb3 smilies problem after converting

Posted by Arcanjo - 2008/01/07 23:54

Hi!

I have a script that converts phpbb3 directly to fireboard...the only thing that this script cant do is import the users avatars and Private Messages...the rest does all..

In this script I only have one big problem its my phpbb smilies..I have allot, I can easily add this smilies to the fireboard emoticons table but thats not the problem...

After my conversion is done all I get in my fireboard is something like this (in the txt file)

and the only thing I want is the smile code..because I can add those smilies and codes to fb similes table...

Please is there some guru or someone o can make-me a small script that removes everything except the smiles codes???

I tried believe me but I dont have the knowledge to make something like this...maybe with time...

Please help me

Arcanjo <http://www.bestofjoomla.com/images/fbfiles/files/smilies.txt>

Save it as a txt to see!!!!

Hi!

Again..I found this http://www.phpfreaks.com/print.php?cmd=tutorial&tut_id=141 but as I said my knowledge is bad so I dont no if this is a help to someone who will (I hope) help me!

Arcanjo
