## FB looking inside FB component folder for Avatars?

Posted by rad4christ - 2008/01/17 02:06

---

Instead of joomlaroot/images, as the notes stated, my FB upgrade (from 1.03) looks to joomlaroot/com\_fireboard/avatar to work. I've copied the folder there to get my avatars, but is this normal? How do I get it to the right location.
