
I cannot create any categories for the forums...

Posted by likelara - 2008/01/17 21:06

I use Joomla 1.5 and downloaded FireBoard_1.0.4_Stable_CompletePackage. Everything looks fine to me, except: I can't create any new category for the forum. In FireBoard Forum Administration, I press the button +New, after that I start to fill basic information, ... after that when I press the button Save, everytime I'll get a blank window and nothing is created.

Any help please? Thank you...

Stop shouting. Sounds like your install wasn't not complete. But first go into the forum configuration and disable any plugins that you do NOT actually have installed-in particular the badwords option.
