## Fireboard 1.0.4 Bug thread

Posted by grumblemarc - 2008/01/18 02:10

---

I thought I'd start this one up since the installation issues thread was getting quite convoluted.

Please report any 1.0.4 bugs in this thread. This is NOT the thread to report anything regarding upgrading or installation issues. If your's is one of those please post in this thread. This is also NOT the thread to report template issues-in particular the Numinu template. This is also not the thread to report integration issues with other components/modules like Community Builder or GroupJive.

Any issues NOT related to .4 bugs SPECIFICALLY will be DELETED without warning. MAKE ABSOLUTELY SURE that any bugs reported here are NOT in the bugtracker already or they will also get deleted without warning. And lastly, no bumping threads.

=====

## Re:Fireboard 1.0.4 Bug thread

Posted by klette - 2008/01/18 02:48

---

1. wrong css-coding: change of font-size doesn't take effect
2. show latest posts not regarding the settings of the cb tab
3. session, session and again session - still not working correctly when new threads/answers are posted.
4. sometimes the quotation doesn't work
5. performance: there are tons of sql-queries when opening the forum or clicking on the latest post button - isn't there a possibility to decrease them?

I really appreciate the work of the guys behind fireboard and don't let me be misunderstood, but I would appreciate it even more if they would concentrate more on a stable version than on new features.

Choose "allow child group" for your forums in the forum manager.

Ok here is my list of bugs and i have to say i'm a bit disappointed to see 1.0.3 known bugs still there :

1: REGRESSION - Restricted board access is buggy, if i set access to restricted board to one person once then i can't remove him the access forever. This worked great under with 1.0.3 version so this is a regression

Discussion thread : [here](#)

Bugtracker : [here](#)

2: Restricted latest post still do not work like in 1.0.3.

workaround : [here](#)

Bugtracker : [here](#)

3: Post from child boards don't appear when you click the "Show latest post" button, again already present in 1.0.3

4: Report to moderator message send a broken link to the post.

EDIT: post updated with bugtrackers

## Re:Fireboard 1.0.4 Bug thread

Posted by sskopnik - 2008/02/13 02:12

Found a Bug. After upgrading I could not change from main forum page to categories any more! Got a nearly blank page

Error log:

PHP Warning: main() : open\_basedir restriction in effect. File(/http/php/lib/php/interpreter.bbcode.inc.php) is not within the allowed path(s): (/http/virtual/rsg-steinbeck.de/) in /http/virtual/rsg-steinbeck.de/htdocs/joomla/components/com\_fireboard/sources/interpreter.fireboard.inc.php on line 40, referer: [http://neu.rsg-steinbeck.de/joomla/index.php?option=com\\_fireboard&Itemid=58](http://neu.rsg-steinbeck.de/joomla/index.php?option=com_fireboard&Itemid=58)

PHP Warning: main(interpreter.bbcode.inc.php) : failed to open stream: Operation not permitted in /http/virtual/rsg-steinbeck.de/htdocs/joomla/components/com\_fireboard/sources/interpreter.fireboard.inc.php on line 40, referer: [http://neu.rsg-steinbeck.de/joomla/index.php?option=com\\_fireboard&Itemid=58](http://neu.rsg-steinbeck.de/joomla/index.php?option=com_fireboard&Itemid=58)

PHP Warning: main() : Failed opening 'interpreter.bbcode.inc.php' for inclusion (include\_path='.:/http/php/lib/php') in /http/virtual/rsg-steinbeck.de/htdocs/joomla/components/com\_fireboard/sources/interpreter.fireboard.inc.php on line 40, referer: [http://neu.rsg-steinbeck.de/joomla/index.php?option=com\\_fireboard&Itemid=58](http://neu.rsg-steinbeck.de/joomla/index.php?option=com_fireboard&Itemid=58)

PHP Fatal error: Class 'BBCodeInterpreter' not found in /http/virtual/rsg-steinbeck.de/htdocs/joomla/components/com\_fireboard/sources/interpreter.fireboard.inc.php on line 42, referer: [http://neu.rsg-steinbeck.de/joomla/index.php?option=com\\_fireboard&Itemid=58](http://neu.rsg-steinbeck.de/joomla/index.php?option=com_fireboard&Itemid=58)

Fix:

In file interpreter.fireboard.inc.php  
Path : \components\com\_fireboard\sources

change:

```
include_once("interpreter.bbcode.inc.php");
```

to:

```
include_once($mainframe->getCfg("absolute_path") . '/components/com_fireboard/sources/interpreter.bbcode.inc.php');
```

An everything works again!!! The error appeared on my Webservice-Provider (Unix). No problem in my Windows test environment!

Think this should be fixed in the next release!

Another little problem, see screenshot below, where do these strange char's come from?

---

## Re:Fireboard 1.0.4 Bug thread

Posted by sskopnik - 2008/02/13 02:42

Here's the image. See  i» ¿

These char's are repeated in the FB-Configuration, too. Where do they come from?

Found that the problem must be related to german translation and page coding. If I switch to UTF-8-Encoding the chars disappear

Hello,

Here is the new bug! :unsure:

I del a Topic / Thread sucessfully.

But the counter (Thread / Answer Counter) in the front, isn't set back.

I look in post.php, but in the code the database #\_fb\_categories is not coded.

So I must open the database and del it manuell.

I think this is a bug, isn't it?!

(SORRY FOR MY BAD SCHOOLEnglish :blush: , but I'm German :silly: )

Christian

I searched for a good long time before posting a "bug"

For years now users are showed as logged in Joomla and logged out in FB.

Example, it shows joomla user with "welcome, username" but Fireboard shows "welcome Guest"

Furthermore, the user then decides to login to FB and now the "new" indicators work and the user is showed as logged in.

I found the "new" indicator post but it appeared not to help (and quite a long topic)

I also went over the "solved" section.

Joomla 1.5

FB Final, no hacks. No CB no real addons.

## Re:Fireboard 1.0.4 Bug thread

Posted by krank - 2008/03/06 19:22

---

OK, these two things have been bothering me for a while. Using 1.0.3 on one site and 1.0.4 on another (both using swedish language, but that shouldn't be a problem...). <http://sfo.omegarpg.dyndns.org> (1.0.3) and <http://omegarpg.dyndns.org/kadaver> (1.0.4) .

Problem One: certain keywords turned weird

Look at this page. Notice anything strange? Look at the word "Scriptura" on the fourth line of the message. Looks like "\_script\_ura", right? Weird, right? It's happened with other words. "script" and "base" are the two I can find atm. This problem is in both 1.0.3 and 1.0.4.

Problem Two: Square brackets turn everything to crap

Look at this

test1 test2 test3 test4

]

This problem is INTRODUCED in 1.0.4.

Now we'll see if this message looks like it should on this forum...

Anyways, the first problem is annoying but manageable, but the second

---

Running joomla 1.0.15 on both sites.

Let's just say this brackets thing won't be making a 1.0.4 fan out of me... This is not good, people - any ideas for a workaround?

## Re:Fireboard 1.0.4 Bug thread

Posted by ianhales - 2008/03/27 18:15

I'm having a javascript error on the topic selection page, the new topic page and the category listing page (may be more but these are the ones I've noticed).

I posted a new thread but its been deleted without any explanation twice so I figured maybe its because I didn't post in here (I have searched the forums extensively and looked through the bug tracker - couldn't find a record of this bug anywhere).

I'm on J! 1.0.15 and using the latest FB release.  
The bug only happens in IE and it gives the following info:  
"Line 122, Char 9, Object does not support property or method"

I can't work out which file its relating to or I'd try to work it out myself.

If this ends up getting deleted, please could someone explain why because I can't see any reason for it  
Thanks,  
Ian

## Re:Fireboard 1.0.4 Bug thread

Posted by mcrollo - 2008/04/01 11:26

---

@n0fear:

The latest Joomla! Version. Which one? I think you use Joomla 1.5.2 ... Hm?!

The warning results from the fact, that Clexus isn't compatible with Joomla! 1.5.x (not native / not legacy) like myPMS and myPMS-enhanced aren't compatible also (not native / not legacy). :) The only PMS's I know, that are compatible with Joomla 1.5.x today, are Messages (native), uddeIM (legacy) and Primezilla (legacy). No other one of the PMS's are working today with Joomla! 1.5.x. Try another PMS and you will see, it works ;)

Greetings  
Frank

## Re:Fireboard 1.0.4 Bug thread

Posted by addicted2sex - 2008/04/09 13:50

---

I found a fix for the count bug:

Simply add the selected code in /components/com\_fireboard/template/default/listcat.php from line 359

(here is the actual ?> tag, to be deleted or commented)  
//count the number of topics posted in each forum  
\$database->setQuery("SELECT id FROM #\_\_fb\_messages WHERE catid='\$singerow->id' and parent='0' and hold='0'");  
\$num = \$database->loadObjectList();  
\$numtopics = count(\$num);  
//count the number of replies posted in each forum  
\$database->setQuery("SELECT id FROM #\_\_fb\_messages WHERE catid='\$singerow->id' and parent!='0' and hold='0'");  
\$num = \$database->loadObjectList();  
\$numreplies = count(\$num);

?>

The good thing is that it really works! The bad thing is that when you delete the topic or the forum it's not deleted from the database and this is the actual problem. I'll try to find a fix for it too. :)

## Re:Fireboard 1.0.4 Bug thread

Posted by Trader1 - 2008/04/09 16:57

Hi

I have installed fireboard 1.0.4 (stable). Everything seems to work correctly, but the problem is (this is big a PROBLEM) I cannot create any category/forum. To create created i do the following:

1. fireboard controlpanel->Forum Administrator->New
2. Fill in the Category details
3. Click on save and I get a blank dialog in the '!' icon and couple of buttons namely and . Clicking on OK takes me back to the category details. The category is not created. Next time i tried save the same dialog appeared, i clicked on cancel, but his time all area where category details used be is blanked out with only the fireboard control panel menu text on the left hand side.

Has anyone else came across this problem?

BTW, I am using joomla 1.5.1 in legacy mode.

Thanks

## User Manager Page forgets settings

Posted by gary glass - 2008/04/11 16:15

1. If I select All on the Display # dropdown, the display doesn't list anybody.
2. If I change the sort order, it forgets my display # choice and returns to 10.
3. The label on the link for sorting on the moderator column says "Moderated". Should say "Moderator". (Really it'd be better if I could just click the column headers to sort. That's pretty standard.)

---

## Re:Fireboard 1.0.4 Bug thread

Posted by justincredibleg - 2008/04/15 02:57

Hi danialt.

Could you be a little more specific on how to edit the SEF. Do you mean just under global config in Joomla or are there settings in FB or community builder for it as well. Do I need a third party program?

under global config in Joomla I have the following settings:

Search Engine Friendly URLs: Yes  
Use Apache mod\_rewrite: No  
Add suffix to URLs: Yes

Thanks again!

Hi,

Back to say my problem with fireboard has been resolved. In this case, the difficulties appeared to be related to save.session\_path which was not writable. Host rep suggested that I add the following to .htaccess and it did the trick.

```
php_value session.save_path /tmp
```

Also I would suggest that you really make sure that the database is using utf-8 character code.

## RSS NOT WORKING

Posted by vmajor - 2008/05/10 15:27

---

RSS IS NOT WORKING.

Truly.

Try subscribing to this very forum using the nice shiny RSS icon in the bottom right corner.

PLEASE developers fix this, or give some insight int how to fix it, or instructions on how to remove the RSS icon as it clearly does not work. It just generates overhead for me as I get bug reports. Put something else in that corner as decoration. A pot of dasies for example.

V.

## Re:Fireboard 1.0.4 Bug thread

Posted by Admata - 2008/05/25 19:55

---

Here is few bugs that I have run in to. I am new user, so I might have missed something or I repeat items already discussed. I run Fireboard 1.0.4 and Joomla 1.5.3  
SEO, SEF and Apache rewrite are on. PHP is version 5.2.2 and safe mode is off.

1. FB profile can change all other userdetails, but password. Obviously it's because FB 1.0.4 doesn't recognise the newest Joomla 1.5.3. Forum gives following message:

"Fatal error: Class 'joomlaVersion' not found in /home/pt5545/public\_html/components/com\_fireboard/template/default/plugin/myprofile/myprofile.php on line 702"

2. QUOTE wont work the way it should. Whitout spesific formulation () it wont give any quotebox, but just types QUOTE up to borrowed chapter.

3. pdf-tool is not working. Gives following error message:

"Warning: include(/home/pt5545/public\_html/includes/class.ezpdf.php) : failed to open stream: No such file or directory in /home/pt5545/public\_html/components/com\_fireboard/sources/fb\_pdf.php on line 63

Warning: include() : Failed opening '/home/pt5545/public\_html/includes/class.ezpdf.php' for inclusion (include\_path='.:usr/lib/php:usr/local/lib/php') in /home/pt5545/public\_html/components/com\_fireboard/sources/fb\_pdf.php on line 63

Fatal error: Class 'Cezpdf' not found in /home/pt5545/public\_html/components/com\_fireboard/sources/fb\_pdf.php on line 88"

4. Antispam & antibot CAPTCHA is not working. No matter how right I give the checking code, I got answer that the code is wrong and I can't write anything.

Despite these, I like the Fireboard and the way it's working so far.

My new Joomla+FB site is here:

<http://hakomaja.net/keskustelu>

### BUGS and FIXES

So I'll start on a more positive note...the fix.

It's about the one where if you delete a topic, the count still stays the same and it goes weird.

Well this isn't evenm abug, and I'm sure Fireboard develpers are aware of it...

Just go ointo Admin...Components...Fireboard...Then on the navigation it says something like 'Recount Post category statistics'

:):) simple.

## BUG

If you try and move a topic from the category view, you cant specify a forum to move it to and, (if you're stupid like me) you click move anyway it dissapears. Only way to move something is to go into the database and manually changew the category number

hope i've helped :)

---

5. performance: there are tons of sql-queries when opening the forum or clicking on the latest post button - isn't there a possibility to decrease them?

This is a major problem for me as well. I've just ported a large SMF forum to FB (112,000+ posts) and the Forum appears to be generating too many SQL connections resulting in the whole site going offline. It's also horribly slow.

Anyone else experiencing this?

addicted2sex wrote:

Simply add the selected code in /components/com\_fireboard/template/default/listcat.php from line 359

(here is the actual ?> tag, to be deleted or commented)

```
//count the number of topics posted in each forum
```

```
$database->setQuery("SELECT id FROM #__fb_messages WHERE catid='$singerow->id' and parent='0' and hold='0'");
```

```
$num = $database->loadObjectList();
```

```
$numtopics = count($num);
```

```
//count the number of replies posted in each forum
```

```
$database->setQuery("SELECT id FROM #__fb_messages WHERE catid='$singerow->id' and parent!='0' and hold='0'");
```

```
$num = $database->loadObjectList();
```

```
$numreplies = count($num);
```

```
?>
```

Is there in the meantime a fix for the messed up display of code?

In addition to this: If code is quoted the preview doesn't work.

Hi,

I've used fireboard once before - but I'm having the same issue. Read post - goes to a page with no template.

Can someone suggest a fix - this is time critical for me.

Thanks :)

did one better... (since JoomlaHacks is down)

downgraded to 1.0.3 - everything works... hmmm I wonder what that means...

either way... I'm glad...

looking forward to 1.1

Hello!

im using the template Red Evolution, fireboard 1.04 and J1.5.4

everything works fine as long as i dont try to create a new forum thread.. when doing so this is the result:

<http://img143.imageshack.us/img143/4748/screenshot1rf1.jpg>

<http://img151.imageshack.us/img151/5414/screenshot2io4.jpg>

any help would be very appreciated

regards,  
flair

Thanks for the template anyway. These days I'll change the template on my fireboard with this one and I'll tell you if I'm having the same problems.

- BUT -

I think that this may be due to template .css incompatibility (I mean the main .css from the Joomla template and from the fireboard one). But on the second picture I see that some of the code is messy, so have a look into the code for "minor bugs" like missing brackets, or } or

So one moderator receives three emails. I think that the correct behaviour should be one email for each of them.

Same thing happens with subscriptions to threads. Here is more problematic, because I have threads where it is expected to have 100-200 subscribers, so some of them could receive 100-200 emails for each new reply!!!!

Any idea about how to fix it??

Thanks!  
Miguel

Hi there,

I use Joomla 1.0.x and Fireboard 1.0.4. The problem was, that when moving a topic, the title of the topic in the old thread, which should link to its new location, was double url-encoded, resulting in something like ...&id=12&ItemID=13... which of course didn't work.

I use the flat layout, so the fix was to edit

/components/com\_fireboard/template/default/flat.php on line 355 and change

to either

hoping that JB\_LIVEURLREL and the result of sefRelToAbs() are url-encoded, or

which does some double work but produces valid results independently of the previous question.

This may be an issue when using another layout as well, so the appropriate file(s) should be changed.

Hope this helps someone. As I am not a Joomla/Fireboard expert, better solutions are welcome.

Many thanx to the delelopers :) !

I am using an Fireboard1.0.4 on Joomla 1.5.4

running captcha, appear captcha image,,but can't work.

I was tried posting, error message.(when no login)  
"wrong code"

pls tell me this problems.

example:

<http://www.dos-v.biz/forum/post-reply/2-pc.html>

I guess the favorite/unfavorite, subscribe/unsubscribe redirect to fb profile bug is just not that important is it? Still patiently waiting. Doesn't someone have a fix?

Thanks

Here is a fix for CB 1.1, FB 1.0.4. I checked out the code for FB 1.0.5 RC2, and it "fixes" this issue by doing a redirect to the forum topic instead of trying to go to the profile page, so I replicated that behaviour here (post.php).

I couldn't download CB 1.2 RC3 (as I'm not a CB documentation subscriber) to see whether it has the fixes for cb.simpleboardtab.php.

I haven't fixed favorite/unfavorite because this feature is not present in the CB plugin, so I've disabled it on my websites (via the FB config page).
