## Badwords Hiccup

Posted by airgasm - 2007/05/16 07:44

---

Hi, I have downloaded the latest files for Badwords2 from [http://www.schoolastech.com/index.php?option=com\\_remository&Itemid=29&func=select&id=3](http://www.schoolastech.com/index.php?option=com_remository&Itemid=29&func=select&id=3). After installation of the latest FireBoard build, I have found it was necessary to edit the edit the file

components/com\_fireboard/template/default/view.php on line 31.

I changed

```
"require_once ('components/com_badword/class.badword.php');"
```

to

```
" require_once ('components/com_badwords2/class.badwords2.php');".
```

That stopped the program tripping up however, when I set the badword option to yes, all posts now have \* This message has been censored because it contained one or more words set by the administrator \*. The problem here is the only badwords set are badword\*,

badword2,

\*test\*

which I am using for testing. I would appreciate some assistance here please, thankyou.

---

Step 1: Modify code in /components/com\_fireboard/template/default/view.php by

Delete or comment out

```
//add notification that the message was filtered for bad words
```

```
if ($badwords == "true") {  
$msg_text = _COM_A_BADWORDS_NOTICE;  
}
```

Modify

Old Code:

```
if ($fbConfig) {  
$badwords = Badword::filter($fb_message_txt, $my);  
}
```

New Code:

```
if ($fbConfig) {  
$badwords = Badword::filter($fb_message_txt, $my);  
if ($badwords) {  
$fb_message_txt = Badword::flush($fb_message_txt, $my);  
}  
}
```

Step 2: Modify code in /components/com\_fireboard/template/default/post.php by

Old Code:

```
if ($fbConfig){  
$badwords = Badword::filter($fb_message_txt, $my);  
if ($badwords) {  
$fb_message_txt = _COM_A_BADWORDS_NOTICE;  
}  
}
```

New Code:

```
if ($fbConfig){  
require_once ('components/com_badwords2/class.badwords2.php');
```

```
$badwords = Badword::filter($fb_message_txt, $my);
if ($badwords) {
    $fb_message_txt = Badword::flush($fb_message_txt, $my);
}
}
```

I think by creating this badwords childboard has most definitely increased the focus on the badwords issue.

I've been posting elsewhere without a resolution .... until now.

This has resolved my issues and is a real asset to the more professional forums that I'm in the midst of creating for a client.

I cannot thank you enough for your input in getting this resolved.

Thank you very much.

:laugh:

Posted by jefferis - 2007/06/12 00:13

---

No Joy.

I tried to edit the post.php for this error:

Fatal error: Undefined class name 'badword' in

/usr/www/users/myname/tacky/components/com\_fireboard/template/default/post.php on line 1310

And it did not work but produced more errors. I tried to install the latest version of the comp from the last post's link, and it helped not. When I added the changes suggested, I got the error about missing badwords2 something or other in addition to another error.

I don't have any badwords 2 comp as far as I know...

Jeff

thankyou this helped me as well....

much appreciated:woohoo:

i used this badwords file and edited as advised by the first two posters with success

[http://www.bestofjoomla.com/components/com\\_fireboard/uploaded/files/com\\_BadWords2\\_1.zip](http://www.bestofjoomla.com/components/com_fireboard/uploaded/files/com_BadWords2_1.zip)

Hi, I have performed the latest steps with success. I am still having one issue. Error message below.

Warning: preg\_match(): Compilation failed: missing ) at offset 9 in

/home2/eastwood/public\_html/content/components/com\_badwords2/class.badwords2.php on line 74

Any assistance appreciated

Hi,

First i want to say thank you for the solution, its working fine when viewing posts in the forum.

I have found one small problem with it thou, if the user choose to use PDF option in the Forum Tools (upper right corner in the beginning of the toppic.), then the words are not censored.

I understand that this have nothing to do with the Badword component, thats why im askin here if anyone of you having

---

an idea on how to solve this or the only solution to disable pdf in FB?

/Paul

```

Modify

Old Code:

```
if ($fbConfig) {
$badwords = Badword::filter($fb_message_txt, $my);
}
```

New Code:

```
if ($fbConfig) {
$badwords = Badword::filter($fb_message_txt, $my);
if ($badwords) {
$fb_message_txt = Badword::flush($fb_message_txt, $my);
}
}
```

Step 2: Modify code in /components/com\_fireboard/template/default/post.php by

Old Code:

```
if ($fbConfig){
$badwords = Badword::filter($fb_message_txt, $my);
if ($badwords) {
$fb_message_txt = _COM_A_BADWORDS_NOTICE;
}
}
```

New Code:

```
if ($fbConfig){
require_once ('components/com_badwords2/class.badwords2.php');
$badwords = Badword::filter($fb_message_txt, $my);
if ($badwords) {
$fb_message_txt = Badword::flush($fb_message_txt, $my);
}
}
```

I'm using the "default\_red" template. Is there anything different I need to do versus what you wrote above which looks like was intended to be used with the "default" template?

Thanks.

Do not forget to change this!

in view.php  
line 31

from:  
    require\_once ('components/com\_badword/class.badword.php');  
  
to:  
    require\_once ('components/com\_badwords2/class.badwords2.php');  
  
otherwise it won't work.

Hello again,

just like to say that I've installed 1.0.3 and made the modifications and all is still well with this fix. I am surprised that this is not added into the code for a new release but hey ho such is life.

One thing I have just noticed for the first time is that it does not filter out the bad words from a topic title, it only works on the content of the post...

Any thoughts on this ???

Thanks ...

---

I have followed the above ideas/instructions and it works fine on the site. but if a user subscribes to a thread then it leaves the post unchanged/uncensored.

any ideas?

thanks for the work so far!

Hi

This works great and the forum is now working great with Badword2. Only trouble is that it now Badword2 doesn't work with anything else in particular JA Submit. I know this is probably somebody else's issue but any ideas?

Many thanks

Danny

I'm using FB1.0.3

Just so you know I was being a dummy and had not published the mambot.  
Another little thing though and I've seen a forum issue about it somewhere but badword does not seem to filter the subject title. Any pointers?

Danny

---

Does anyone konw how to filter the subject/ topic line? This is very important. It seems like there is no solution to this yet???

---

## Re:Badwords Hiccup

Posted by jlcampos - 2007/11/10 02:22

---

And what about the emails sent to the subscribers to the topic?

Any way to filter that too?

Jorge Luis

---

## Re:Badwords Hiccup

---

Is there a way to also filter the subject line? While it is filtering the content, it does not seem to kill bad words from the subject of a posting.....

Hi

I just went back to this forum, and found my modification useful to others. But my mod could not cover some issued as somebody posted. I'd like to help for addition mod but I've some problem. Due to previous mod, I help my friend's website for solved badword problem. That website already installed Joomla and other required component. Thence, I'd like someone introduce me a step and required component/mod should install in Joomla for me to testing code while modification.

I will do as best as I can for modification.
