
embedded map in 1.0.4

Posted by racoon - 2008/01/29 06:16

Hi,

if you want to embed maps from Google or Yahoo in Fireboard like this

<http://www.bestofjoomla.com/images/fbfiles/images/maptag.jpg>

then try the following attachment ;)

http://www.bestofjoomla.com/images/fbfiles/files/fireboard_map_addon.zip

Please don't forget to register Google or Map24 to get a personal access key.
You need the key to use the maps.

Good job. Get a mini version into the profile area. That'll be the next request. :lol:

So All I need is to register from Google or map24 My members don't have to be registered there also to view it?
Where Exactly do I put the key racoon.

information

To use google or map24, you must register to get a access-key.
Enter this key in "code1" at the following position:

```
$map_key = 'your google key';  
$map_key = 'your map24 key';
```

Confused. :huh:

only the administrator must register his site name (url) to get a valid access key...

<http://code.google.com/apis/maps/signup.html>

http://devnet.map24.com/map24-ajax-api/ajax_free_register

I know that.. My question is.. Where do I put that Access Key in the Code I posted earlier.

Like I'm Looking at Code1 where to I put the Access Key I mean.

'your google key' & 'your map24 key'.

Have you tried in between the ' '?
