
phpbb convert, how do i sync users?

Posted by vertigo - 2008/01/25 04:21

I have just recently installed Fireboard, and converted my user database over to FB from phpbb2.

I have only users in fireboard but no users in joomla itself. Is there a way to merge or sync the 2? I've seen a module for something similar, but i'm unable to get ahold of it due to the way they have their site setup.

My main problem being, is my email addy is coming up already registered(from the fireboard user DB), so now i'm having admin issues with this.

ever find out the answer to this ? - I think there is a back-end option in fireboard to export all users to CB.
