
next-gen Forum Editor

Posted by iosoft - 2007/12/27 07:18

There are 2 threads in this BoJ forum that exists from the very beginning of Fireboard.

1. New! indicator problem
2. wysiwyg HTML instead of BBCode

In 1.0.4 the New! problem is almost solved, now its time for the editor.
But I personally support BBCode but also want WYSIWYG for general users.

For that I introduce you ALPHA Version of Universal Forum Editor.

Have a look -
<http://gigahertz.byethost18.com/extra/editor/editor2.html>

Still, many things to add. Developers help will be very very helpful.

it's a good idea to add a wysiwyg editor for Fireboards bbcode

this is a feature that i am waiting for :woohoo:

nope

gomjabbars wysiwyg editor produces HTML code

Any progress on this one? I'm cleaning out all inactive projects in this category and moving them.

This is a good idee... maybe the core devloppers can add the wysiwyg editor support that we can choose it directly from our profile no ?

Yes yes, Its ACTIVE :P

I need some development help from those who has experience in coding with TinyMCE.
