## Joomla! 1.0.14 released

Posted by Lavau - 2008/02/13 01:22

---

Serious problem when upgrading to Joomla 1.0.14 with Security Images active : no more logins nor inscription !

The patches valid in 1.0.13 are no longer valid. And Walter Cedric has a lot of other things to do, before releasing an update...

Meanwhile, I maintain the site open, but for passive visits only :

<http://debats.caton-censeur.org>

Can not save the CSS anymore from the Fireboard admin panel since the update.

This problem of denied login, does not come from Security Images, but from a bug in the file Joomla.php, in the directory "includes".

It is compatible with some servers (bluehost.com), but not with some others, precisely with 1and1.fr, just where my real site is !

Just replace the new file joomla.php, by the old one, version 1.0.13, and things are up and running again.
