
FireBoard 1.0.4 Stable Post in both Eng and Rus?

Posted by Nikishka - 2008/02/17 22:24

Hello Friends!

I was wondering if there is a way to post in both English and Russian? My friends speak English and Russian. I have installed English version, but I would like to see if I can make it possible to allow my friends to post in English and Russian at the same time? I want the system language or the primary language stay English. I am ok with the English buttons and links, etc. I just want to let my Russian friends to be able to type in Cyrillic.

Thank you!

If you install Joomla 1.5 with Fireboard, you will have Unicode (UTF-8) as the default encoding for Fireboard. This will make multiples languages display properly on one page without the need to change the encoding of the page. All your friends will have to do is to change the language input on their keyboard. CAA:89
