
can't create any categories "db error"

Posted by Phosphorus - 2007/05/02 10:45

hi all

i got a problem after installing the Fireboard.

below the error

DB function failed with error number 1054

```
Unknown column 'g.group_id' in 'on clause' SQL=SELECT a.*, a.name AS category, u.name AS editor, g.name AS
groupname, h.name AS admingroup FROM jos_fb_categories AS a LEFT JOIN jos_users AS u ON u.id = a.checked_out
LEFT JOIN jos_core_acl_aro_groups AS g ON g.group_id = a.pub_access LEFT JOIN jos_core_acl_aro_groups AS h
ON h.group_id = a.admin_access GROUP BY a.id ORDER BY a.ordering, a.name
```

i think is a problem on db .. im not a expert ..

can you post below the db query to do for fix that ?

thx in advance.

Maybe u fix problem if reinstall FB. Check your MySql to work properly, if u do not do about her, call your hosting provider and explain him problem. This error is not so popular...

Re:can't create any categories "db error"

Posted by Phosphorus - 2007/05/02 13:23

all work fine and re install dont fix that probs.

the code part prob is on file "admin.fireboard.php"

btw i found that (below) on joomla forum.

Basically what has happened is that the phpGACL library has been updated in the current release compared to 1.0. During this update the database has changed that phpgacl uses. There is a way to do permissions using the phpGacl library. The fireboard author hasn't used the library methods.

Posted by Phosphorus - 2007/05/03 13:52

any help ? im not alone with that probs...

Re:can't create any categories \"db error\"

Posted by Phosphorus - 2007/05/03 16:46

i think is cause of MySQL5.0

I think I have solved this issue, at least it seems to work for me.

It has been a slight change in table structure in Joomla 1.5, and the legacy support for mosTreeRecurse dosen't seem to work correctly or at least not for Fireboard.

extract attached file to: /administrator/components/com_fireboard

http://www.bestofjoomla.com/components/com_fireboard/uploaded/files/admin-896edf688200cbbebef5accaaedb6770.zip

Has this worked for anyone cuz it didn't work for me?

CORRECTION:

IT WORKS!!!

Thank you.

Re:can't create any categories \"db error&

Posted by wvine - 2007/08/07 05:33

My understanding is that the .zip file above contains this code STARTING AT LINE 417 >>>

```
$database->setQuery("SELECT a.*, a.name AS category, u.name AS editor, g.name AS groupname, h.name AS
admingroup" . "\nFROM #__fb_categories AS a"
//      . "\nLEFT JOIN #__fb_categories AS b ON b.id = a.parent"
      . "\nLEFT JOIN #__users AS u ON u.id = a.checked_out" . "\nLEFT JOIN #__core_acl_aro_groups AS g ON g.id =
a.pub_access"
      . "\nLEFT JOIN #__core_acl_aro_groups AS h ON h.id = a.admin_access" . "\n GROUP BY a.id" . "\n
ORDER BY a.ordering, a.name" . "\n");
```

Which replaces the following code in the current admin.fireboard.php file AT "APPROXIMATELY" LINE 371 (depending on build date):

```
$database->setQuery("SELECT a.*, a.name AS category, u.name AS editor, g.name AS groupname, h.name AS
admingroup" . "\nFROM #__fb_categories AS a"
/*      . "\nLEFT JOIN #__fb_categories AS b ON b.id = a.parent"*/
      . "\nLEFT JOIN #__users AS u ON u.id = a.checked_out"
      . "\nLEFT JOIN #__core_acl_aro_groups AS g ON g.group_id = a.pub_access" . "\nLEFT JOIN
#__core_acl_aro_groups AS h ON h.group_id = a.admin_access" . "\n GROUP BY a.id" . "\n ORDER BY a.ordering,
a.name" . "\n");
```

This worked for me on 8-06-2007 with FireBoard 1.0.2 SVN nightly and Joomla 1.5 nightly. Substituting only this section retains the newest FireBoard admin development work accomplished since this "very welcome" adjustment was published some months ago. For me, this was a preferred alternative to completely replacing admin.fireboard.php with

the older file.

sorry how do i do this?

i have tried to installed the zipped file and it said:

"Error! Could not find an XML setup file in the package."

how do "extract attached file to: /administrator/components/com_fireboard"?

many many thanks for any help

Hey there... :)

Sounds like you are actually trying to install the .zip file (in posts above) into Joomla as a component???

If so... this is not how you make use of this contribution.

The .zip file is a package (not to be installed into Joomla) BUT to be unzipped locally on your computer. The contents of the zip file is an admin file for FireBoard. You will take this single .php file and replace the file (of the same name) in your FireBoard package. This will require

- unzipping the file package above
- unzipping the FireBoard install package
- placing the admin file from the .zip into the FireBoard installation package (thus replacing the existing one)
- zipping the FireBoard package again
- installing into Joomla! as a component

It's been a while since I've used the hack but I believe this is the process.

Hope this helps. :)

Re:can't create any categories

Posted by vincentbaines - 2007/08/21 00:55

awesome thank you so much. i've done correctly down to stage 3 inclusive. i've only ever had to unzip before so the

program i got off the internet only allows unzipping, but ill google for a program to zip it back up and then ill re-install it.

thank you soooo much, saved me probably 3+ hours of trying to work it out (at which point i would of given up)

thank you so much, got it corrected now so the forum administration now works. yessssss.

half midnight now, been working on for 10 hours today.

thats me done for today, time for bed.

thanks again

Re:can't create any categories \"db error\"

Posted by Gstart - 2007/09/05 16:24

Used this file. Now I get this error:

Notice: Undefined variable: menu in

/home/*****/public_html/administrator/components/com_fireboard/admin.fireboard.php on line 1770

Any Idea?

Re:can't create any categories \"db error\"

Posted by wwvine - 2007/09/05 16:28

What version of FireBoard?

Did you use the complete Admin file from that .zip package?

Or... did you just substitute the altered code >> into your admin.fireboard.php??

:)

=====

Re:can't create any categories \"db error\"

Posted by Gstart - 2007/09/05 18:07

Version 1.0.1 and I just overwrote the old admin.fireboard.php with the new one :)

Re:can't create any categories \"db error\"

Posted by wwvine - 2007/09/05 18:23

Unless you have a specific reason for using 1.0.1 ???

The PATCH to admin.fireboard.php was written for FireBoard 1.0.2 (while under development).

I am unaware if this patch will work *at all* with 1.0.1 :unsure:

Personally, I have used the admin patch successfully with 1.0.2 SVN builds, RC's etc... on more than one site in testing.
:cheer:

FireBoard is being release today (2007-09-05) as version 1.0.3 (which is the 1.0.2 code with the finishing touches that BoJ have ready to release). This is a Joomla! 1.0.13 component that will work with Joomla! 1.5 in legacy mode (backward compatibility) on. Try the patch in this context. ALSO: YOU MAY WANT TO ONLY SUBSTITUTE THE LINES DESCRIBED EARLIER IN THIS POST.... AS I HAVE ATTEMPTED A COMPLETE SWAP OF THE OLD admin.fireboard.php PATCH WITH FIREBOARD 1.0.3!!!

This entry clarifies how

FireBoard 1.0.3 is vastly improved code to 1.0.1 with many new features, enhancements and security improvements. It will be supported as a stable release (which means patches, security fixes, etc.. for the future). You may want to consider this build over 1.0.1 (if this works with your site plans). :)

Hope this helps

Posted by carsten888 - 2008/06/24 18:27

(bump)

zip needed here too. trying to download leads to 404.

:(
