## Memori Yipang Unthinkable

Posted by alvine - 2008/02/26 03:13

---

Hello

I tried to use this (really beautiful) template with Joomla 1.5.1, and everything seems to work fine... except the top menu.

I linked a picture of what I obtain when I set "Menu Style" on "Simple List" in the mainmenu module preferences. If I set it on "List", "Vertical", or even "Horizontal", the top menu shall always be displayed vertically.

And... I don't have a clue what to do to fix that. Do you ?

That's a real matter, since I really love this template and didn't find any other compatibility problem with the 1.5 version of Joomla. It'd be quite sad not to use it because of this only problem.

If you have any idea or any question, please, tell me.

Thanks to you all. <http://www.bestofjoomla.com/images/fbfiles/images/scrnsht.jpg>

@alvine,

since i make this template for j! 1.0.x, i haven't try it with j! 1.5. i'll will post the solutions later.

@amirfazwan

i attached the blank file for u. <http://www.bestofjoomla.com/images/fbfiles/images/logo.jpg>

Can u make this template work with 1.5 joomla version, would be really nice. I cant use outhr joomla versions on my webhostprovider so I love this template and I also gonna ask u if its possible to get it in blue colors- dark blue.

my template looks like this on my 1.5 version.

As u can see on the main module, it doesnt look good I dont know how to change this either Im new to Joomla

sorry couldnt upload the screenshoot.

This is the errors I get under template manager:

Menu AssignmentMenus: Cannot assign Default Template

ParametersThe Parameter-File /templates/sz\_memori\_yipang\_unthinkable/params.ini is Unwritable!

hi guys,

i have a very bad problem with this template. :(

for example. i published the easy guestbook component and linked it on the topmenu. if you take a look of the entries, you can only see the poster in top of the site and the entries are at the end of the site. between there is nothing.

for example take a look in my guestbook.

[http://treffen-zeven.de/index.php?option=com\\_easygb&Itemid=44](http://treffen-zeven.de/index.php?option=com_easygb&Itemid=44)

thx for your answer in advance ;)

the same problem did i have with the Private Messaging System (PMS)  
all other components are working right.

ps: thx for this great template :woohoo:
