## I cant add Announcement

Posted by sultanx - 2008/03/01 16:52

---

Hi,  
When i try to add announcement it says hacking attempt :)

This seems to be a problem some of us are experiencing. I am using Joomla 1.5 and Fireboard 1.0.4

Heh it appears pressing the back button will cause a repost, so I'm just editing this to be different.

Hacking Attempt means that you dont have sufficient access to the announcement "plugin". Is it configured with YOUR user ID in the FB config?

Also I cannot speak for J1.5. It does not work correctly with FireBoard. REGARDLESS if the legacy mode is enabled.

I hope we soon get a version that is compatible with Joomla 1.5. My permissions in the FireBoard Users is set to Administrator, so I know that's not the problem. Any idea on when a 1.5 compatible version will be arriving?
