## Login redirection to the forum home page

Posted by LocaliceR - 2007/07/31 11:30

---

A little attentiveness would be for the user when he/she logs in via the forum login module would be to redirect him/her to the forum home page instead of the site home page.

=====

## Re:Login redirection to the forum home page

---

did you ever get this issue resolved? I'm having the same thing.

=====

## Re:Login redirection to the forum home page

Posted by viet4777 - 2007/08/05 11:42

---

I have a small modification for login Box:

[http://luyenkim.net/home9/index.php?option=com\\_fireboard&Itemid=88889095](http://luyenkim.net/home9/index.php?option=com_fireboard&Itemid=88889095)

Do you need it?

Here is my modification:

<http://luyenkim.net/home9/images/fbfiles/files/profilebox.zip>

:blush:

---

Quite good, viet4777! Thanks.

=====

## Re:Login redirection to the forum home page

Posted by viet4777 - 2007/08/05 14:02

---

Thanks!

1. You should change lin 193:

```
$loginlink = sefRelToAbs( 'index.php?option=com_fireboard&Itemid=88889095' );
```

you change '88889095' by your Itemid!

2. Copy code css.txt to your default CSS in Backend. This code is used for format the login form. You can change it for your website.

I am having the same problem as the original poster, however, I cannot understand how to fix it from these replies. I'm not too good with code.

---

## Re:Login redirection to the forum home page

Posted by slhawk98 - 2007/08/12 06:55

---

This is a great solution. What it does is:

1. Replaces the Login Link with login boxes
2. Result is you are able to login at the message board.

I strongly suggest this feature is implemented in the next version of Fireboard!

### Detailed Instructions

1. Download and edit viet4777 files at  
<http://luyenkim.net/home9/images/fbfiles/files/profilebox.zip>
2. Change Itemid on line 190 to match the Itemid for your site:  
`$loginlink = "index.php?option=com_fireboard&Itemid=88889095";`
3. Change Itemid on line 193 to match the Itemid for your site:  
`$loginlink = sefRelToAbs( 'index.php?option=com_fireboard&Itemid=88889095' );`

In my case my Fireboard Forum is at :

[http://www.basicwebs.net/tigertech/joomla1013/index.php?option=com\\_fireboard&Itemid=12](http://www.basicwebs.net/tigertech/joomla1013/index.php?option=com_fireboard&Itemid=12)

So I changed 88889095 to 12.

Once these changes are complete, FTP the new file to the following location. Be sure to rename the original file just in case:

`components/com_fireboard/template/default/plugin/profilebox/profilebox.php`

The following makes the format of the new login feature match the existing layout.

Copy the following text to the top of the CSS file for your sites default template. This is the same code from viet4777 css.txt files, but I changed the comment line.

In your joomla admin backend, go to Site/Template Manager/Site Templates, click the radio button by your default template, click Edit CSS, paste the following text at the top and you should be set.

```
/* Fireboard Fix - MOD Login */
```

```
.loggin_fb_modul
```

```
{  
  color: #685A37;  
  font-family: Tahoma, Arial, Helvetica, sans-serif;  
  font-size: 11px;  
}
```

```
div.loggin_fb_modul .inputbox_login
```

```
{
```

```
border-color: #9D9D9D;
border-style: solid;
border-width: 1px;
font-family: Tahoma, Arial, Helvetica, sans-serif;
font-size: 11px;
margin-left: 5px;
margin-right: 5px;
width: 80px;
padding: 2px 2px 2px 2px;
}
```

```
div.loggin_fb_modul .button_login
{
font-family: Tahoma, Verdana, Arial, Sans-Serif;
font-size: 10px;
height: 22px;
padding-bottom: 1px;
padding-left: 5px;
padding-right: 5px;
margin-left: 0px !important;
margin-left: -10px;
}
/* Fireboard Fix - MOD Login */
```

Posted by amnion - 2007/08/12 19:05

---

Hey, thanks a TON!

---

## Re:Login redirection to the forum home page

Posted by amnion - 2007/10/05 05:58

---

Okay, this works great and everything--I love this add-on--but I'm experiencing one small problem. Whenever I log in, it shows something called `_ANN_ANNOUNCEMENTS` right there. How can I edit that or take it out? Here's a screenshot... <http://www.bestofjoomla.com/images/fbfiles/images/login-43dd67d4da714dfbd50825e830e7e1ca.jpg>

Also, is there a way to get it so you stay in the forum upon logout?

---

## Re:Login redirection to the forum home page

Posted by amnion - 2007/10/05 06:20

---

Fixed it; there was a line in the code:  
?>

I changed to:

?>

Works great. Still can't figure how to get it to stay in the forum after logout though.

---

Hi, i've edited profilebox.php file with my Item ID, i've replaced the file and added fix lines to my css. I can see the input box for login but i can't login: i write user and password, but it returns like they are wrong. Login from joomla's module works. Someone can help me?  
Thanks and sorry for my bad English!

## Re:Login redirection to the forum home page

Posted by demouser - 2007/10/13 07:38

---

it works P E R F E C T!!!!

But what happen in case of community builder logins?

Edit: now works!

## FOR CB LOGINS/REGISTRATIONS ##

If you are using community builder signups/registrations read the following

+

Additional setting before uploading profilebox.php

1. Open profilebox.php with a notepad and 'replace all' com\_registration with com\_comprofiler

2. go to line 219 and add a 's' to 'register'. (To become 'registers')  
the line will look like this

# END #

Edit again: why the code is not viewable? :?

=====

## Re:Login redirection to the forum home page

Posted by killo - 2007/10/13 10:04

---

I've tried with community builder and without, but it doesn't work yet. This is the link  
[http://www.recanatibasket.it/index.php?option=com\\_fireboard&Itemid=26](http://www.recanatibasket.it/index.php?option=com_fireboard&Itemid=26), user: pass test:qwerty

Now it's set with CB, i've edited profilebox.php as you told me. At line 93 ther is another task=register. I've tried also setting it to "registers" but nothing changes.

=====

## Re:Login redirection to the forum home page

I am having the same problem that a click on fireboard 1.03 "login" redirects user to my home page.

Running Joomla 1.12  
Firboard 1.03  
Community Builder

I was unable to follow/implement the solutions discussed above.

Any suggestions or more explanations for a non-programmer?

Thx.

## Re:Login redirection to the forum home page

Posted by cra2 - 2007/12/07 23:14

---

so obviously, noone who clicks login on the forums page wants to be sent back to the homepage of the site.

the fix that's proposed in this thread seems like it has some folks thinking it worked and others who still get errors.

what is the final fix? and will it be inserted into the core code?

thanks much!  
cra2

## Re:Login redirection to the forum home page

Posted by khalid - 2007/12/13 14:12

---

I have make the changed, but when I wil login the page redirect to the root with no content. Its like the root dousnt exist. When I refresh the page I see the normal root. But I have seo friendly link names like <http://www.mydomain.com/index.php/music-forum.html>. So I have make it like this:

```
$loginlink = "index.php/music-forum.html";  
$loginlink = sefRelToAbs( 'index.php/music-forum.html' );
```

Dous somebody know what's the problem?

## Re:Login redirection to the forum home page

Posted by Chad - 2007/12/27 22:27

---

Okay what if we don't have a file that is profilebox.php ... and none of our css files contains anything about login.

I have registered a fake user, to do post testing, and I can't login. I can't even login in as the admin. What the flip do I do?

I want to change this so that I can start making the forums into more of a community, but if I can't get people to login, I don't know which forums to add with children.

I have Fireboard 1.0 and I have it installed on Legacy 1.0/1.5 everything seems correct. Just don't ...:blush: seem to be getting anything from searching these boards that answer clearly.

If you can't even click the login to get a login what to do. I don't even have a login box. I would want that also. But I'm generally new to this, and I tried hard enough to figure it out.

So in summary, this is useful, if you had the profilebox.php, but I don't even have that file. So what do I do?

=====

Okay, I have the same problem as a couple of people --the login form appears but it doesn't work. When I try logging in through it nothing happens.

Also it has underscores in front of all the fields. Like this:  
\_USERNAME \_PASSWORD \_LOST\_PASSWORD etc.

It seems like there are one or two final steps missing in these instructions. I feel like I'm close but not being a programmer I don't know what to do. Can anyone fill in the gaps for me? I'm running J1.5 so maybe that has something to do with it?

thanks so much!

Oh my,

I don't understand a word of all this but I do have that problem I have the nightlybuilt I would have thought that would be fixed in there.

Is there no easy solutiion, I just been looking at my profilebox.php and this looks like chinese to me I understand as much chinese as what I been able to read in that file I downloaded that zipfile, what am I suppose to do with it ? This discussion is allready a little older, is that zipfile allready for 1.0.5 do i just use the joomla installer to upload it and make the changes afterwoods ?

sorry about all this stupid questions, but I used to be a chef and no computer whizkid

=====

## Re:Login redirection to the forum home page

Posted by enjoy7777 - 2008/09/07 04:21

---

Ok what I did for good redirection of Joomla 1.5 and FB 1.0.4 it is very simple. I didn't install anything. I only opened the file /components/com\_user/views/login/view.html.php and in lines 54-56 is a code:  
\$params->def( 'pageclass\_sfx', '' );  
\$params->def( 'login', 'index.php' );  
\$params->def( 'logout', 'index.php' );

---

I changed one of those lines to

```
$params->def( 'pageclass_sfx', '' );  
$params->def( 'login', 'index.php?option=com_fireboard&Itemid=53&func=listcat' );  
$params->def( 'logout', 'index.php' );
```

the string index.php?option=com\_fireboard&Itemid=53&func=listcat is the page to which I want to redirect users after login. It works

=====

## Re:Login redirection to the forum home page

Posted by Telar - 2008/09/07 05:20

---

thanks for the answer. Only two questions  
how do I find out the ID of my forum ( as I said I'm a noob)

and second, would'nt that mean if I do it your way people who lock into my mainpage will end up in the forum ?. the forum is part of my main page www.loosenyourmind.com and http://www.loosenyourmind.com/esoterikforum.html. I think this is what this zipfile is suppose to do. If I understand this right (user viet4777 ) wrote a seperate login.php just for the fireboard component, and If i would understand how to implement it I would have allready :-)

By the way the same thing is anoying in this forum also:laugh: you lock into the forum and endup on your mainpage.

and by the way, how do I get those advertisement banners insertetB)

=====

## Re:Login redirection to the forum home page

Posted by jakobe75 - 2008/11/13 23:48

---

soo...

I added this to my 1.0.5RC2 install and it destroyed the layout.

I was unable to view anything upon click of the forum button  
just white page with some basic links on it

I am using joomla 1.0.15

so I had to change it back

is this file available for the 1.05rc2 version of FB and the J 1.0.15 ?

please assist because the login feature that redirects back to the home page is annoying is annoying, users are getting lost and distracted.

Thanks in advance

=====

## Re:Login redirection to the forum home page

Posted by ilkrz - 2008/11/27 23:42

---

I have exactly the same problem.  
Joomla 1.5.8 & Fireboard 1.0.5 RC2 has installed.  
Problem is Fireboard login redirects the user to frontpage.  
I have added profilebox.php hack and utilized right instruction steps but the same blank layout page published. I have attached the screenshot. Acording to last 2 reply this is a general mistake for 1.0.5 RC2 Thanks in Advance.  
<http://www.bestofjoomla.com/images/fbfiles/images/sshot.png>

---

=====

## Re:Login redirection to the forum home page

Posted by ilkrz - 2008/11/27 23:47

---

thank you enjoy7777 for sharing.

i did what you say and it worked as you had described. Thank you very much. Meanwhile i had downgraded from 1.0.5 RC2 to 1.0.4 stable

/components/com\_user/views/login/view.html.php and in lines 54-56 is a code:

Code:

```
$params->def( 'pageclass_sfx', " );  
$params->def( 'login', 'index.php' );  
$params->def( 'logout', 'index.php' );
```

I changed one of those lines to

Code:

```
$params->def( 'pageclass_sfx', " );  
$params->def( 'login', 'index.php?option=com_fireboard&Itemid=53&func=listcat' );  
$params->def( 'logout', 'index.php' );
```

my site's frontpage login works perfect: [Hosting Paketleri](#)  
and the forum page login works at properly: [Hosting Paketleri Forum](#)

Thank you.
