## Profiles site Bestofjoomla. What's that?

Posted by gokino - 2008/03/06 20:52

---

Hi, what's the component/module/plugin or other used in this page for the profiles?

[http://www.bestofjoomla.com/component/option,com\\_fireboard/func,userlist/Itemid,38/](http://www.bestofjoomla.com/component/option,com_fireboard/func,userlist/Itemid,38/)

Thanks. :)

Max

---

Ok thanks :laugh:

I have watched in the section download but the two plugin there aren't (fireboard userlist plugin and fbprofile plugin).

Where I can find them? :S

Thanks

They are modified versions of components found at [extensions.joomla.org](http://extensions.joomla.org). The ones used HERE are NOT available for download.

---

I have seen that two plugin ( fireboard userlist plugin and fbprofile plugin) are within

`com_fireboard\template\default\plugin`

What I make to use them?

:blink:

---

You don't do anything with them. They are needed to make FireBoard work. They are not add ons.

I am also interested in finding out how to put together a "profiles" page like the one found here on [bestofjoomla.com](http://bestofjoomla.com).

---

Can someone point me in the right direction?

Thanks.

yeah, i'd love a nice users list that when you click on a users name it links to the/a PM message.

users can do this now on our site via clicking PM but having that same functionality in a separate user list would be great.
