
Does it work, or not? I'm Confused.

Posted by AnnieEek - 2007/05/02 22:09

I read the other thread "Where can I get it?", and saw that a new link to the developer's site was added today, but I'm wondering if anyone actually has it working with FireBoard? It sounds like someone in that thread tried it, but couldn't get it to work. I have a site that definitely needs the filter, but I don't want to waste time and risk messing anything else up by installing it if nobody else actually has it working. Thanks in advance to anyone who can help!

I'm no wiser than you... but installing it, testing in one hidden forum, and reporting back would take less time than writing this message. lol Just giving you a hard time. I mean no offense.

;)

Thanks for the reply. I was starting to think that it was a lost cause. :laugh:

So... any luck?

When I tried it, it was giving MySQL Errors for some reason. Then again when I had Joomla Board it did the same thing. I just have to watch the Bad Words myself.
