Posted by ChrisB123 - 2007/05/27 18:31

If you'd payed any attention to this site, it will also do the same, probably something to do with cache or sessions or something. It will probably be a small error that will be ironed out in future releases, I wouldnt worry about it, although it is frustrating

Re:Loads forum page then reloads once again?

Posted by palebluedot - 2007/05/27 23:15

This has been discussed before. It is an issue with Joomla. Search for 'refresh twice' if you want to read more.

Posted by jasonrhl - 2007/05/30 04:55

There is a fix that you have to pay for to stop this. I feel it is a big problem that should have been looked at quite a while back.

=====

Re:Loads forum page then reloads once again?

Posted by azenis - 2007/05/30 15:03

my site is doing this too. strange thing is that it only started to do it the other day...

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/08 02:30

This is definitely NOT Joomla problem. Problem is that simpleboard -> joomlaboard -> and now FireBoard maintain their own sessions for users, not using Joomla sessions, here is the code:

file: fireboard.php

Session maintaining code starts at line 226, later on you will find line responsible for reload

line 265: echo 'setTimeout("window.location.reload(true)",100);';Why set timeout instead of direct reload in original code? Reload must happen after database update in next lines (out of if statement) otherwise there is endless loop of redirection.

FireBoard guys should definitely get a rid of their own session table and use Joomla session table to identify visitor. Or do dual system, in case of joomla installation use joomla sessions, in case of stand alone installation use fireboard sessions.

I replaced mentioned code with quick and dirty fix (may be not too dirty). Code odes exactly same but "reload" is happening "on background":

```
global $mosConfig_live_site;
```

```
$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systemtime where userid=$my->id"Â«Â»);
```

```
$database->query();
mosRedirect($mosConfig_live_site.$_ENV);Works very nice.
```

Posted by Bojan1983 - 2007/06/09 13:51

This fixes this problem?

If yes, this is huge, why this isnt sticky!?

(i have FB 1.0 so i guess thats why i cant find that line in my fireboard.php so i cant try this...)

Re:Loads forum page then reloads once again?

Posted by kuato - 2007/06/09 14:55

This "fix" really works. Any problem reported after applying this hack ? :/

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/09 17:22

No problems.

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/09 17:27

FB 1.0 has same line of code in fireboard.php file
echo 'setTimeout("window.location.reload(true)",100);';I bet you find this in Simpleboard as well as in JoomlaBoard.

```
global $mosConfig_live_site;
$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systemtime where userid=$my->id"Â«Â»);
$database->query();
mosRedirect($mosConfig_live_site.$_ENV);Works very nice.
```

Maybe this should be added in the next FB release?

Re:Loads forum page then reloads once again?

Prutkar wrote:

FB 1.0 has same line of code in fireboard.php file

```
echo 'setTimeout("window.location.reload( true )",100);';I bet you find this in Simpleboard as well as in JoomlaBoard.
```

I ve found this line :

```
echo 'setTimeout("window.location.reload( true )",100);';
```

I changed that whole line to :

```
global $mosConfig_live_site;
```

```
$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systime where userid=$my->id"Â«Â»);
```

```
$database->query();
```

```
mosRedirect($mosConfig_live_site.$_ENV);
```

when I went to "save" i ve got this msg

Not Acceptable

An appropriate representation of the requested resource /joomla/administrator/index2.php could not be found on this server.

I am attaching my fireboard.php(remove ".jpg") ... Maybe you could explain it little better or just simply change this fireboard.php so everyone can just DL it and replace the original

tnx http://www.bestofjoomla.com/components/com_fireboard/uploaded/images/fireboard-05b326687bbf56530c095de6910b21c5.jpg

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/09 23:22

This message has nothing to do with changing some code in fireboard.php file under

joomla_root/components/com_fireboard Not Acceptable

An appropriate representation of the requested resource /joomla/administrator/index2.php could not be found on this server.Editing and then Saving file in any editor should not give you this error...it is unrelated message to proposed solution of replacing small piece of code.

Re:Loads forum page then reloads once again?

Posted by jack_34 - 2007/06/10 10:09

I have try it and this works good

Re:Loads forum page then reloads once again?

Posted by Bojan1983 - 2007/06/10 21:36

I have tried to change it with joomlaXplorer, but later I DLed file, and changed it with notepad without problem... Even now, when i uploded it again, when i try to edit and save it with joomlaXplorer i get same msg...

But now, what happen is following.

If you click on some link in "latest post" module, page reloads, but not the forum... Then if you click one more time everything looks ok. Also not good, but much better then before...

btw, just to be sure, can someone plz upload modified fireboard.php?

Re:Loads forum page then reloads once again?

Posted by Bojan1983 - 2007/06/10 22:30

I copy pasted it to notepad. saved it as fireboard.php and it doesnt work, cant you just upload the file?

=====

Re:Loads forum page then reloads once again?

Posted by notzippy - 2007/06/11 16:17

Good hack, this should be added to the core.

=====

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/11 20:18

As I mentioned before:

FireBoard should use Joomla sessions. Right now FireBoard's own session handling and processing is adding an overhead in request processing time, not utilizing what Joomla is already offering. (FireBoard should keep their own session handling for stand alone installations only)

This is just a fix of very unlucky implementation and yes, should be added to the core if before mentioned proposal is not going to be implemented.

=====

Re:Loads forum page then reloads once again?

Posted by dragonlje124 - 2007/06/11 20:51

hmm yea why did joomla board didn't used joomla sessions at the beginning?

=====

Re:Loads forum page then reloads once again?

Posted by florut - 2007/06/12 12:00

Thanks VERY much for this Prutkar. This stupid reloading started to annoy me from the 1st time i used joomlaboard, 4 years ago !!

As always, very good coding (my name is flocmoimeme on blastchat).

Just wondering which version of FB you are using ? FB 1.0.1 original file is like that lines 255 to 271 :

```
if ($inactivePeriod setQuery("UPDATE #__fb_sessions SET allowed='na', readtopics=" where userid=$my->id");
    $database->query();
    setcookie("fboard_settings", $fbSession->lasttime, time() + 31536000, '/');

    // do not reload the page if user is posting
    if ($func != "post")
    {
        echo 'setTimeout("window.location.reload( true )",100);';
    }
}

$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systime where userid=$my->id");
$database->query();
}So if i change only setTimeout("window.location.reload( true )",100); to global $mosConfig_live_site;
$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systime where userid=$my->id"Â«Â»);
```

```

$database->query();
mosRedirect($mosConfig_live_site.$_ENV);as you said previously, it works, but as the whole part of the file becomes :
if ($inactivePeriod setQuery("UPDATE #__fb_sessions SET allowed='na', readtopics=" where userid=$my->id"Â«Â»);
    $database->query();
    setcookie("fboard_settings", $fbSession->lasttime, time() + 31536000, '/');

    // do not reload the page if user is posting
    if ($func != "post"Â«Â»)
    {
        echo 'global $mosConfig_live_site;
$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systemtime where userid=$my->id"Â«Â»);
$database->query();
mosRedirect($mosConfig_live_site.$_ENV);';
    }
}

$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systemtime where userid=$my->id"Â«Â»);
$database->query();
}I'm afraid the table #__fb_sessions is updated twice don't you think (i'm a php beginner) ? Wouldn't it be possible to
remove the two $database->...; lines from your hack ?

```

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/12 20:23

Explore what mosRedirect does in joomla documentation :-mosRedirect(\$mosConfig_live_site.\$_ENV);You will find out that in case code processing gets inside that if statement in which we replaced that settimeout...reload, then if will never get to 2nd UPDATE.

In fact, I think that settimeout...reload had value of 100ms in it just so that php processing will get to that 2nd UPDATE line and be executed and reload happens after that.

Because if UPDATE wont happen, your code gets into endless loop of reloading.

```

This was implemented:IF (session does not exist or it expired) {
    reload after 100ms
}
UPDATE session table and set last users visit time

```

```

Now IF we would change it to:IF (session does not exist or it expired) {
    reload right away (leave code) which mosRedirect() does this file execution will end here
}
UPDATE session table and set last users visit time

```

If we hit mosRedirect it will never get to UPDATE session table so same IF statement will fail on next execution = endless loop

```

that is whyIF (session does not exist or it expired) {
    UPDATE session table and set last users visit time (copy of line outside IF)
    mosRedirect(); //leave this code, and reload everything (but happens before anything is printed out to user, so there is
no reload visible)
}
UPDATE session table and set last users visit time

```

Re:Loads forum page then reloads once again?

Posted by florut - 2007/06/12 22:14

Thanks VERY much for taking time to explain. All the time i take on Joomla project is for learning, learning, and learning...

Well it's right that it's much more about an algorithmic problem than a php problem as i said... I think i have understood everything.

I just wonder where did you get the joomla documentation you are talking about ? I did not see anything about this function in the developer wiki ??

=====

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/12 22:44

I think I did not get it from documentation, I observed core joomla components code and saw the function mosRedirect, then I was looking for its definition to understand what it does. You can find its definition in includes/joomla.php file.

=====

Re:Loads forum page then reloads once again?

Posted by jasonrhl - 2007/06/21 07:46

We have implemented the hack and have found users now need to click twice on the forum menu item. I'm assuming this isn't to be expected?

=====

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/21 08:15

No, it was working just fine (I can not present it as I took FireBoard off from my site due to reported problems posting new messages, database was being filled up by id and other information with 0 which resulted in Duplicate index error messages)

Please, read about mosRedirect to understand what that function does, it redirects, and it is redirecting to same URL as that javascript.

=====

Re:Loads forum page then reloads once again?

Posted by zammbi - 2007/06/21 10:03

Yea I have the same problem as jasonrhl any ideas why?

=====

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/21 10:28

So what happens after first click guys? Where is a bug report, please provide more information.

=====

Re:Loads forum page then reloads once again?

Posted by zammbi - 2007/06/21 12:17

Well it seems to load to my home page sometimes and then I have to click a 2nd time to get to the forum. My server is down atm, once its up again I'll try find some more info.

=====

Re:Loads forum page then reloads once again?

Posted by Bojan1983 - 2007/06/21 13:33

zammbi wrote:

Same here...

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/06/21 19:55

Well:

This code is responsible for redirection:mosRedirect(\$mosConfig_live_site.\$_ENV);
\$_ENV variable is supposed to be holding everything after domain from current http request, i.e.

If request was:http://www.blah.com/index.php?option=com_fireboard&catid=124

Then:

\$_ENV should be equal to/index.php?option=com_fireboard&catid=124

\$_ENV variable might be empty in your case, so redirection is going to your frontpage, change that to direct forum URL (i.e. make it http://www.blah.com/index.php?option=com_fireboard), OR manually find all GET/POST request variables and add them to the end of redirect request, OR find out another way how to redirect to same URL as original request was made.

Re:Loads forum page then reloads once again?

Posted by dexityimages - 2007/07/04 23:20

Anyone find a fix to this?

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/07/05 16:44

If you read few pages back you'll find fix.

Re:Loads forum page then reloads once again?

Posted by PGLion - 2007/07/17 17:35

It fixed the reload problem but is there a fix available for the click a 2nd time to go to the forum?

Re:Loads forum page then reloads once again?

Posted by curt - 2007/09/18 17:24

Prutkar,

I just installed Fireboard 1.0.3 stable into Joomla 1.0.13 and CB 1.1, and I also have the reload problem.

Line 265 in my fireboard.php does not show:

```
echo 'setTimeout("window.location.reload( true )",100);';
```

However, I found this at line 256-258:

```
if ($func != "post"Â«Â») {  
    echo 'setTimeout("window.location.reload( true )",100);';  
}
```

Should I replace line 257 (echo...) with your code?

```
global $mosConfig_live_site;  
$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systemtime where userid=$my->id"Â«Â»);  
$database->query();  
mosRedirect($mosConfig_live_site.$_ENV);
```

Will this solve the problem?

Thanks for your help!

Re:Loads forum page then reloads once again?

Posted by kgw - 2007/09/19 09:14

I think we should also look at "Sneaky Module Syndrome" and "What template are you using".
I have the latest stable Fireboard.

Sneaky Module: News Flash -- Random news. I noticed with this puppy turned on I get a double refresh.
Sneaky Module 2: Latest posts. Running this puppy I get double refresh.
Sneaky Module 3: Some hidden modules will double refresh, I forget the one that did it.
This is even when them NOT showing up in the side of forums.

Template coding. I like to change templates to confuse my members now and then. I discovered "Lazy Mans Syndrome" while using templates for Vbulletin. They create a template and it has extra rogue code in it. Try another template.

PGLion wrote:

It fixed the reload problem but is there a fix available for the click a 2nd time to go to the forum?well, I think you are referring to option when user clicks direct topic link which has topic id or category id values included
<http://.../...topicid=xxx&catid=XXX>, code would have to catch those and ad them to our new code.

But as far as I understand that should be already taken care of by ENV_ variable

=====

curt wrote:

Should I replace line 257 (echo...) with your code?

If line 265 is not there with timeout code, but it is at line 257, of course, replace it and that should do it.

=====

Re:Loads forum page then reloads once again?

Posted by danialt - 2007/09/19 14:33

Can you check with this file, if it is working?

rename it to fireboard.php <http://www.bestofjoomla.com/images/fbfiles/files/fireboard-9f1c2e81de9322ddd79650e449f9a46e.txt>

Re:Loads forum page then reloads once again?

Posted by azenis - 2007/09/19 14:49

I just put that file on my site (1.0.3 stable) and it seems to be running much faster and not loading twice - thanks :D

Re:Loads forum page then reloads once again?

Posted by curt - 2007/09/19 16:13

Prutkar wrote:

If line 265 is not there with timeout code, but it is at line 257, of course, replace it and that should do it.

Prutkar,

I replaced line 257:

```
echo 'setTimeout("window.location.reload( true )",100);';
```

(Line 257 has javascript tags, that goes around 'setTimeout("window.location.reload(true)",100); but they are being stripped by this forum and I get them to show here.)

with:

```
global $mosConfig_live_site;
$db->setQuery("UPDATE #__fb_sessions SET lasttime=$systemtime where userid=$my->id" . $db->quote());
$db->query();
mosRedirect($mosConfig_live_site.$_ENV);
```

However, the problem I have now is that the first time I click on my menu for Fireboard, the page refreshes but does not go to Fireboard. As an example, if I'm on my homepage (front page), I click on my menu item for Fireboard, the page refreshes back to the same homepage with the same domain URL. I click on my menu for Fireboard a second time, and then it goes to Fireboard. Every subsequent click on the menu goes to Fireboard.

Do you know what the problem is?

Thanks for your help!

Curt, Prutkar,

You guys better check out Danial's earlier post for the real solution, see:
...com_fireboard/Itemid,38/func,view/id,8718/catid,66/limit,10/limitstart,30/#23582

Cheers,
Michel

Michel,

Are you referring to the post from "danialt"? I did as he suggested (replaced my fireboard.php with his file). So far, so good.

=====

Re:Loads forum page then reloads once again?

Posted by ianrispin - 2007/09/20 16:45

I tried the new fireboard.php from danialt and it seemed to fix the double refresh....

But after 15 mins or so when trying to go to forum from my homepage I got this error...

Firefox can't find the server at www.sitename.comhttp.

and in the address bar was http://www.sitename.comhttp://www.sitename.com/forum

Notice the repetition.....so something is wrong. :(

Problem stopped when i replaced the original fireboard.php

=====

Re:Loads forum page then reloads once again?

Posted by curt - 2007/09/20 20:43

Michel,

I tried it on Firefox and got something similar:

"Unable to connect

Firefox can't establish a connection to the server at mysite.com.

Try Again"

It's unable to connect because the URL changed to:

https://mysite.com/index.php?option=com_fireboard&Itemid=37&func=showcat&catid=9

The URL changed from "http" to "https". I don't know why and I don't have SSL. Every time I click on "Try Again", I get the same message.

This is so bizarre.

Also, I think that when I go back to my site on IE7 a day later and click on my menu item for Fireboard forum, the homepage (front page) refreshes. I have to click it again to get to the forum. I need to confirm this.

=====

Re:Loads forum page then reloads once again?

Posted by GODComplex - 2007/09/21 16:52

Is it possible to get the code parts? I want to inject these parts manual in my fireboard.php, because mine is already an edited version.

Thanxx

=====

Re:Loads forum page then reloads once again?

Posted by grmi64 - 2007/09/22 09:12

I'd like the code parts as I've modified my fireboard.php as well...would make integration quite a bit easier.

-Greg

Re:Loads forum page then reloads once again?

Posted by bpresent - 2007/10/11 00:42

Add the following right at the top after the

// Dont allow direct linking

defined ('_VALID_MOS') or die('Direct Access to this location is not allowed.');

```
$self_url = sprintf('http%s://%s%s',  
    (isset($_SERVER) && $_SERVER == TRUE ? 's': ''),  
    $_SERVER,  
    $_SERVER  
);
```

Around about line 250

Was:

```
if ($inactivePeriod setQuery("UPDATE #__fb_sessions SET allowed='na', readtopics=" where userid=$my->id"Â«Â»);  
    $database->query();  
    setcookie("fboard_settings", $fbSession->lasttime, time() + 31536000, '/');
```

```
// do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect
if ($func != "post"Â«Â») {
    echo 'setTimeout("window.location.reload( true )",100);'
}
}
Now:
if ($inactivePeriod setQuery("UPDATE #__fb_sessions SET allowed='na',lasttime={$systime}, readtopics=' where
userid={$my->id}"Â«Â»);
$database->query();
setcookie("fboard_settings", $fbSession->lasttime, time() + 31536000, '/');

// do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect
if ($func != "post"Â«Â») {
    mosRedirect($self_url);
    die();
}
/* echo 'setTimeout("window.location.reload( true )",100);' */
}
```

Re:Loads forum page then reloads once again?

Posted by curt - 2007/10/11 01:14

bpresent,

What does that code do? Does that fix the double-refresh problem? Or, does it fix something else, such as the Page Not Found on first click?

Re:Loads forum page then reloads once again?

Posted by bpresent - 2007/10/11 01:24

It fixes the "Loads forum page then reloads once again" issue.

I simply compared the new version provided by danialt (http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,8718/catid,66/limit,10/limitstart,30/#23582) against my installed version and pasted the result.

So far it seems to work for me.... (no double loading and no errors yet). I have switched J! SEO back on (sh404SEF) but I have not exhaustively tested yet. I will post a reply if I experience errors.

Re:Loads forum page then reloads once again?

Posted by curt - 2007/10/11 01:34

After doing what Prutkar suggested, I don't have this double-load problem anymore. However, I have this page-not-found error. Here's my post about it:

http://www.bestofjoomla.com/component/option,com_fireboard/func,view/Itemid,38/catid,66/id,25565/

Do you know what the fix is?

Re:Loads forum page then reloads once again?

Posted by bpresent - 2007/10/11 15:57

I am now getting the same problem.

For some reason the `$_SERVER` variable contains the `http://hostname`. Not sure what's causing that but the hack (as I see it at the moment - and for these combination of J! and FB) is to simply redirect to `$_SERVER` rather than build the redirect in the way you would expect and as suggested in the original fix.

In other words the solution to the initial problem for me (using J! 1.0.13 and FB 1.0.3) is to simply replace the javascript with a redirect to `$_SERVER`.

No need to create `$self_url` - just simply comment out the js and add in the redirect.

```
// do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect
```

```
if ($func != "post"Â«Â») {  
  
    mosRedirect($_SERVER);  
    die();  
/*      echo 'setTimeout("window.location.reload( true )",100);'*/  
}
```

Warnings:

- 1) I do not know if this will work with an https
- 2) It may not work with another version of J! (newer or older).

Something somewhere is rewriting `$_SERVER` to append the hostname etc and this may be 'corrected' at a later date.

PS. If you want to test this more easily change the timeout test a few lines above this code. Change the line `$inactivePeriod = ($fbSession->lasttime)+1800;` to (say) `$inactivePeriod = ($fbSession->lasttime)+60;` and the reload is triggered after 1 minute.

Re:Loads forum page then reloads once again?

Posted by bunglehaze - 2007/10/16 03:13

bpresent, which file does this need to be changed in??

cheers

leigh :D

=====

Re:Loads forum page then reloads once again?

Posted by bpresent - 2007/10/16 05:12

fireboard.php (both the fix and time fudge)... but I would not change the code or doc - as I said. I think the "error" lies in the fact that something (perhaps core J!) is changing the `$_SERVER` (but then I'm just a part time hack with a background in COBOL programming so don't rely on my wisdom!!!) Sam ;)

=====

Re:Loads forum page then reloads once again?

Posted by bunglehaze - 2007/10/21 15:32

Sam, any chance you can show the lines of code that should be replaced with the new code you provided please? I think I have the right section but for others who might be bewildered editing core files it will be of use.

This is the section I think you mean (can you confirm please)

```
// do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect  
if ($func != "post") {
```

```
mosRedirect($self_url);
die();
/* echo 'setTimeout("window.location.reload( true )",100);' */
}
}
```

regards

leigh

Re:Loads forum page then reloads once again?

Posted by bpresent - 2007/10/24 11:07

Hi Leigh - sorry for the delay. You have correct location but the code you are showing is the patched code. I would prefer to say that the only change required to the unaltered 1.0.3 code is to comment out the echo (as you have) but simply add two lines above it:

```
mosRedirect($_SERVER);
die();
```

In other words redirect to \$_SERVER (not \$self_url). In fact \$self_url never needs to be created in the first place.

Re:Loads forum page then reloads once again?

Posted by ianrispin - 2007/10/24 14:41

I have tried every version of this fix as it has evolved.

None of them work for me.

They all result in an intermittent bug where the forum page cannot be found, so the user sees an IE 'page not found' error page.

I would LOVE to see an official fix for the double refresh issue.

Rather than any further features or tweaks or extensions I would LOVE it if the developers released a new version with these 4 fixes:

- solve refresh problem
- provide proper CB integration
- eliminate double postings
- official fix for NEW! indicator

Any chance?

Re:Loads forum page then reloads once again?

Posted by moonray - 2007/10/30 04:34

What I have done now, with leigh's help is - my fireboard.php from line 262 to 269 looks like this:

```
// do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect
if ($func != "post"Â«Â») {

    mosRedirect($_SERVER);
    die();
    /*
    echo 'setTimeout("window.location.reload( true )",100);';
    */
```

As of now, it is working fine... have to wait and see if I get any complaints from other users. Anyway, it was an intermittent problem, so it may take some time before I can confirm the fix.

Best regards

Re:Loads forum page then reloads once again?

Posted by gwmbox - 2007/11/16 08:32

Does anyone have a final working fireboard.php file with theses edits they can share - or does the one in SVN already have this fix?

Thanks

Greg

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/11/16 12:50

There is only one edit, I think :-)

in fireboard.php file find

```
{ //grant them 30 minutes of inactivity; then recheck privileges and try to send them back where they came from
setQuery("UPDATE #__fb_sessions SET allowed='na', readtopics=' where userid=$my->id");
    $database->query();
    setcookie("fboard_settings", $fbSession->lasttime, time() + 31536000, '/');

    // do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect
    if ($func != "post") {
        echo 'setTimeout("window.location.reload( true )",100);';
    }
}
$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systime where userid=$my->id");
```

```
$database->query();
}
```

replace it with this (changes are in red color)

```
{ //grant them 30 minutes of inactivity; then recheck privileges and try to send them back where they came from
  $database->setQuery("UPDATE #__fb_sessions SET lasttime=$systime, allowed='na', readtopics=" where
userid=$my->id");
  $database->query();
  setcookie("fboard_settings", $fbSession->lasttime, time() + 31536000, '/');

  // do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect
  if ($func != "post") {
    $self_url = sprintf('http%s://%s%s',
      (isset($_SERVER) && $_SERVER == TRUE ? 's: '),
      $_SERVER,
      $_SERVER
    );
    mosRedirect($self_url);
    die();
    //echo 'setTimeout("window.location.reload( true )",100);';
  }
}

$database->setQuery("UPDATE #__fb_sessions SET lasttime=$systime where userid=$my->id");
$database->query();
}
```

Re:Loads forum page then reloads once again?

Posted by gwmbx - 2007/11/18 07:47

OK I think I have added all that all fine and the double load issues appears fixed. However every now and then I get an error as it tries to load <http://www.mydomain.com/http://www.mydomain.com/comp.....>

Clicking back on the browser (FF2 and IE7) and then reselecting the menu item it works fine - any ideas why it is doing this - note I am using also Joomsef 1.5.1.

Thanks

Greg

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/11/18 12:25

I did not observe this behavior on my server, but can be that yours sometimes sets up those two `$_SERVER` variable (or at least one of them) incorrectly. If you believe that this code is in fact code causing the error, well, we can adjust code to search and remove second incorrect portion, which most probably will be present in `$_SERVER` variable:

```
$new_URI = str_replace("http://", $_SERVER, "", $_SERVER);
$new_URI = str_replace("https://", $_SERVER, "", $new_URI);

$self_url = sprintf('http%s://%s%s', (isset($_SERVER) && $_SERVER == TRUE ? 's: '), $_SERVER, $new_URI );
mosRedirect($self_url);
```

Re:Loads forum page then reloads once again?

Posted by gwmbx - 2007/11/18 14:31

Thanks will give that a try. Are you able to attach your edited working fireboard.php file so I can compare it with mine.

Cheers

Greg

Re:Loads forum page then reloads once again?

Posted by ianrispin - 2007/11/18 20:59

OK.

I have been trying to get these patches to work for weeks and finally think i got it working - without the glitches.

I had the problem others have had that with the basic patch I had an occasional (perhaps 1 in 20) glitch where the URL created looked like:

`http://www.mysite.com/http://www.mysite.com/forum`

I used the patch code provided by prutkar earlier in this thread PLUS his idea to search the URL string and strip out the excess copy of the base URL.

I wrote my own code for this last bit...here is the complete patch with my addition highlighted in red:

```
if ($inactivePeriod setQuery("UPDATE #__fb_sessions SET lasttime=$systemtime, allowed='na', readtopics=" where
userid=$my->id");
    $database->query();
    setcookie("fboard_settings", $fbSession->lasttime, time() + 31536000, '/');

    // do not reload the page if user is posting :: TODO: check if it cab be replaced by mosRedirect
    if ($func != "post") {
        //echo 'setTimeout("window.location.reload( true )",100);';
        $self_url = sprintf('http%s://%s%s',
        (isset($_SERVER) && $_SERVER == TRUE ? 's: '),
        $_SERVER,
        $_SERVER
        );
        if (stripos($self_URL,"http:") != 0)
        {
            $self_url=substr($self_url,stripos($self_URL,"http:"));
        }

        if (stripos($self_URL,"https:") != 0)
        {
            $self_url=substr($self_url,stripos($self_URL,"https:"));
        }
        mosRedirect($self_url);
    die();
    }
}
```

Re:Loads forum page then reloads once again?

Posted by gwmbbox - 2007/11/19 01:23

Hmm ok I tried that but got an error.

Parse error: syntax error, unexpected T_STRING in
/home/myname/public_html/components/com_fireboard/fireboard.php on line 255

It would be great if one of the devs could provide an official fix please - one that can be accessed by all, maybe release a FB1.0.3a or 1.0.4 or as requested release an official fireboard.php fix.

Thanks

Greg

Re:Loads forum page then reloads once again?

Posted by Putte - 2007/12/03 12:42

I now this is a free component and like others have say you cant expect any support on a free component. But how can you call something "Stable" when bugs like this still accurs?

I have no problem with the fireboard except for this reload twice issue. Can you maybe put some effort in to solve this and think about the design of the site later?

=====

Re:Loads forum page then reloads once again?

Posted by danialt - 2007/12/03 14:39

This is not a bug. This is a deficiency of the design of the current code. It can not be solved unless rewrite of most parts of Fireboard. That takes time.

=====

Re:Loads forum page then reloads once again?

Posted by fxstein - 2007/12/05 15:30

Putte wrote:

Not sure the reload twice thing should be called a bug. Its a design issue.

Anyhow I might just have created a fix for it while re-writing the session handling portion of fireboard.php

I was targeting the issues around NEW indicators and the 'Mark entire forum as read' - that did not work as expected.

When I was done re-writing the session handling I eliminated the double-load - for now. I have not had a chance to fully test it but its up and running on my site people are posting and I have not seen any issues tonight. Treat it like Alpha code.

Would be great if you could give it a try and let me know if you find any bugs. The discussion with the attached file is here:

http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,21199/catid,73/limit,6/limitstart,192/

Hope this helps!

=====

Re:Loads forum page then reloads once again?

Posted by Prutkar - 2007/12/05 21:52

Session handling in fireboard just sucks and that is main problem -> reloads, new markers, etc. I assumed so half a year ago, same topic, first page, may be developers are finally looking at this, that would be great?

(I just do not understand why fireboard on topic post, must load everything, print success message, then reloads everything

=====

Re:Loads forum page then reloads once again?

Posted by fxstein - 2007/12/05 21:57

You might want to re-read the post above yours. This is a fix to the problems you are describing.

=====

Re:Loads forum page then reloads once again?

Posted by PaulyPaul - 2007/12/05 21:57

Hello,

I've been observing this thread as I have the same problem. Now by coincidence the author of the JAccelerator component replied back to my question some months late of whether I should switch off the Joomla cache when I enable his component. He said yes I should.

Well since I switched it off today the Fireboard Forum reloading problem has gone.

<http://www.hounslowtw3.net/Forum>

Ta-da! :woohoo:
