
[SOLVED] New messages are sent to all users

Posted by schoenbi - 2008/03/19 15:42

I am running Fireboard 1.04 with Community Builder. I recently changed the configuration of Fireboard (security):

- Email Moderators: No
- Email Administrators: Yes

With this configuration new posts were sent to every user which opted to receive moderator emails (field sendEmail=1 in table jos_users) and not only the administrators!

I quickly turned off the Email Administrator option and analyzed the code.

The following code change is needed to fix this issue:

Filename: post.php (components/com_fireboard/template/default)
Lines: 350 ff

Old code:

```
if($fbConfig==1) {  
    if(strlen($sql2)) { $sql2 .= "\n OR "; }  
    $sql2 .= " u.sendEmail=1";  
}
```

New code:

```
if($fbConfig==1) {  
    if(strlen($sql2)) { $sql2 .= "\n OR "; }  
    $sql2 .= " u.gid >= 24 AND u.sendEmail=1";  
}
```

This solved my issue

Thanks for this!!!

ALL my users are also getting moderator emails.

Could you please tell me what this 'u.gid >= 24 AND' is doing?

Every user in Joomla belongs to a specific group; this is specified in the table jos_users. The available groups are defined in the table jos_core_acl_aro_groups:

A default Joomla 1.5 installation always contains the groups (extract from the table):

id	parent_id	name	lft	rgt	value
24	23	Administrator	15	18	Administrator
25	24	Super Administrator	16	17	Super Administrator

So the `u.gid >=24` is referring to all users which belong to the group with an ID of 24 or higher, which in standard cases would be the Administrators and the Super Administrators.
