
user id's not registering

Posted by babygurl69 - 2008/03/20 13:46

I just installed FB with Joomla 1.0 and the install went fine so i began setting the prefs to my desire and tested. now, i can register a fake user id (atlest i can with no errors) but when i login with the recently created user id i get "your login has been block. please contact the administrator" and nor does it create any user id's under user administrator.

If it helps or makes any difference, i am testing all this on a local machine using easyphp with mysql and apache.

Does anyone know whats going on ?
