
Column Widths

Posted by Poledra - 2007/05/03 09:41

Hi

this is applying to any template so I'm not sure what is going wrong and I'm hoping someone can help me troubleshoot ... and yes this applies to the default template as well.

Site:

http://www.tduguild.net/index.php?option=com_fireboard&Itemid=44

You should be able to browse at least 2 forums so you will see the problem. The columns for Author of the post and any columns on the right are not sticking to their set widths. this makes the threads look quite bad.

even the front is... not right with the right 3 columns - Topics, replies last post - being squished completely.

i have not changed the template yet. Using Dark Yellow currently :) it looks gorgeous.

Hope someone can help!

Woot, I found the problem.

For not sure what reason, I had set tbody & th to 100% width... this of course did not do friendly things to a lot of other pages.

:D
