
new fireboard module

Posted by b166er - 2008/03/25 01:16

Hi, is there an idea to make a brand new module for fireboard latest posts that looks EXACTLY like ALL DISCUSSIONS tab from the Numini template, and eventually loading with ajax options like in the last 8, 12, 24 hours.

UFTT can almost do the layout. It doesn't have the replies off to the left side, and it doesn't do the mouseover color change. I'm sure I can add these two options for its next release. I just released v5, and I'll probably release the next version in a timely manor.
