## All groups\' forums names CHANGED !!! -groupjive-

Posted by kraksa - 2008/03/31 00:48

---

### PLEASE HELP!

I logged in at the front end, went to my group (lets say called "Group123") and I modified my group's settings (I changed "open to all" to "invitations only"), I clicked SAVE and ... in the fb administration panel I found out that the names of all the private forums of other 20 groups registered on my site had CHANGED. Now the title of each of them is "Group123".

What may be the reason of this??? Any help?

Now if I wanted to adjust the forums' names how do I know which group they are linked to?

Thank you in advance

PS. I have:

Fireboard 1.0.3 Stable 04 September 2007 01:00 UTC

Groupjive 1.6 beta3

Joomla! 1.0.15 Stable 22 February 2008 23:00 UTC

I had the same problem a few months ago.

The problem is a Groupjive problem not a FB problem. It's a dbase issue where changes to one category copies to all other categories. Check this out with the GJ forum.

The fix is to update your Groupjive gj\_core\_groups.php file with the file from Groupjive's version 1.6 beta3 build 617.
