
Videos in Forums

Posted by CET - 2008/03/31 22:29

To allow posting of videos in forums (www.racetime.com), I've been using a plug-in called AllVideos Reloaded. It's really nice, but in order to work inside of a component (Fireboard), it needs an API. I'm not much of a programmer, so I'm not sure where the API code should be inserted.

The developer of AVL has agreed to help in this conversation here:

<http://forum.joomla.org/viewtopic.php?f=470&t=245658&sid=a7e65c5494e7f2271cfb4b1556d973c5&p=1252494#p1252494>

API Code:

```
$output = "";  
if (JPluginHelper::importPlugin('content', 'avreloaded')) {  
    $app = &JFactory::getApplication();  
    $res = $app->triggerEvent('onAvReloadedGetVideo', array($mediacode));  
    if (is_array($res) && (count($res) == 1)) {  
        $output = $res;  
    }  
}
```

Hey CET,

To allow posting of videos in forums, I use a mambot named flvTV.
I tweaked it to support fullscreen.
To see it in action, check this link.

Have fun! <http://www.bestofjoomla.com/images/fbfiles/files/flvtv.zip>

By saying "mambot", that makes me think that you're using Joomla 1.0, is that right? I'm using Joomla 1.5, will it still work?

I am afraid it will not.
I set up a J 1.5 for test and no, it won't work.
Anyway, you should check again with AllVideos Reloaded.

Good Luck

That's really nice!

Would you mind sharing the method in which you incorporated the video menu from within Fireboard?
