## Bug in admin.fireboard.php with mysqli (with fix)

Posted by masterchief - 2008/04/03 15:51

---

There is a query that uses native mysql statements around line 60 or so of admin.fireboard.php. This needs to be changed to use the J database object like this as it will cause an error if you are using the mysqli driver:

```
$database->setQuery( "SHOW TABLES LIKE " . $table_nm . "" );  
$database->query();
```

```
if ($database->getAffectedRows()) {  
    $jb_upgrade = true;  
}
```

Hope this helps.
