
relative font-size forum.css attached tpl default

Posted by carsten888 - 2008/04/06 12:37

I replaced all the fixed font-sizes with relative font-size. text becomes a lot more readable and is resizeable (like it should be).

this css file is for the default template.

in your Joomla-template you got to set font-size for body on 0.8em.

location:

components\com_fireboard\template\default/forum.css <http://www.bestofjoomla.com/images/fbfiles/files/forum.txt>

posting the css-file was not allowed (?), so I made it a .txt, so you need to copypaste this into your forum.css.

make a backup first.

:P
