I am also getting this Meessage. Also there is no option available to add new Post/Thread.

Although I have installed fireboard with a fresh Joomla 1.5 installation and Its working fine.  
But not working with existing Joomla 1.5 installation.

Any Suggestions.....Please.....

Its not working with JoomFish 2.0. When I enable "Joomfish - Abstraction Layer" plugin  
the Post New Topic/Thread option got hide and FireBoard Stops working.

Is there any Solutoins ..... Please

I have added following return statement in \plugins\system\jfdatabase\jfdatabase\_inherit.php  
file's loadObject( &\$object, \$translate=true, \$language=null ) function :

```
return $object;
```

and its Working Now!!

WOW!  
Thanks a lot!

You helped me with that, because i had the same issue!

Sorry for a simple question, but can you tell me EXACTLY what lines go where in the jfdatabase\_inherit.php file (maybe  
cut/paste a few lines before, the code, and after lines)?

Thanks.

here it is:

in the file \plugins\system\jfdatabase\jfdatabase\_inherit.php

go to the line 563 and just after the } and before the other } paste and save this code:

```
return $object;
```

the function will looks like this:

```
function loadObject( &$object, $translate=true, $language=null )
```

```
{
if (!is_null($object) && is_object($object)){
    $res = parent::loadObject($translate, $language);
    foreach (get_object_vars($res) as $key=>$val) {
        $object->$key = $val;
    }
}
else {
    $object = parent::loadObject($translate, $language);
}
    return $object;
}
```

SO IT WILL WORK!!!!!!!!!!!!
