
How do I.... Do a lot of different things???

Posted by kcfantasy - 2008/04/10 09:19

I recently converted my SMF to Fireboard, with mixed results... But that is not the issue (I don't think).
<http://kansascityfantasy.com>

I'm not sure if any of this is relevant, but cannot be bad to include it

Joomla! - 1.0.15

Fireboard - 1.0.1 (Was the only version that I could get to work at all for the conversion)

also integrated with:

Community Builder - 1.1

uddeIM - 1.1

If you have time to help, would you mind creating an account so you can have full access to the forums... thanks

Now my questions...

1 - How do I change the forums to show the original message at the top and each reply to the thread following underneath? I have tried to change the setting in the profile, but no luck... I was thinking that something may have messed up during the conversion process?

2 - How do I merge two messages? When converting from SMF to Fireboard some of the threads were split, and I would like to merge them back together.

3 - How do I change the post count manually for a user? During the conversion some user stats did not convert to FB, namely the admin (tpflanz), and since I deleted a few posts after the conversion it shows that tpflanz has a negative number of posts.

4 - How do I pgrade to a newer version of FB without losing anything? After converting to FB I tried to upgrade to a newer version of FB, however, after converting, I could not move a topic board to a new location in the Administration area of Fireboard.

5 - How do I create additional user groups and set permissions to different boards based on those groups?

Thank you for any help, but please only send me links to "Solved" threads, not threads that are 10-15 pages long with no clear direction or resolution.

Travis

Numbers 2 and 5 are unfortunately not possible in Fireboard :-)

Number 1 should be the default behavior, at least it is on my installation. I guess you really need to upgrade to 1.04.

Upgrading (4) should be just a matter of following the upgrade instructions... I upgraded from Joomlaboard to 1.04 directly, so I can't help you with that one, unfortunately.
