## Using mambot Nino(Latex) in fireboard threads

Posted by Hazzar - 2008/02/22 18:41

---

Hi,

I want to use the mambot nino in my fireboard forum so that my members can post math formulas. How can I integrate a joomla plugin or mambot into fireboard? This plugin is especially nice, because it can render 2d and 3d plots and many other interesting things too.

the code should be processed with the preview too.

the producer of nino says that it is especially easy to reuse the code in another system because it is capsuled from the joomla specific code.

=====

Has anyone some idea? Is there something else to combine fireboard with Latex?
