Please click here visit Joomla! Forge.

ED: As Joomla! Forge is offline and the project hasn't moved to JoomlaCode yet, please click here to visit the author's website.

Thanks for the link. Which one is used with Fireboard -- JoomlaBoard badwords or Community Builder badwords? Probably JoomlaBoard since CB is not required for Fireboard installation.

Of course the JoomlaBoard package should be selected.

Telling you the truth this is a hack and was released for JoomlaBoard, the latest one for version 1.1.4 and these files should overwrite the JoomlaBoard files so I would wait until SchoolastechWorks releases the FB hack.

Yeah, I just tried it and it doesn't work with Fireboard.

P.S. -- The last announcement on SchoolastechWorks was in 2005, so I wouldn't hold my breath waiting for it. I'm going to try FoulFilter and see if I can hack it for Fireboard.

I use this com_badword but not com_badword2 and it works with FB. The only problem is that it won't filter badword in the subject section. I have read something about com_badword2 has vulnerability and the author asked to upgrade it. When clicking on the link, the link at joomlaforge, it's dead.

I am not sure what the difference between com_badword and com_badword2 but com_badword seems to be working fine. Here's the file I attached. http://www.bestofjoomla.com/images/fbfiles/files/com_badword.zip
