
Problem: page navigator not working in admin

Posted by hansvanhalteren - 2008/04/15 11:56

Has this been addressed here on these boards ?

FB 1.0.4 on Joomla 1.5.2 legacy

On the fireboard admin page the pagenavigator doesn't work. Clicking a certain page number doesn't do anything. Except an error appears in the left bottom screen of IE7:

Line: 1063

char: 2

Error: 'Document.adminform.limitstart' is null or not an object

Code: 0

Url: 'http://www.reefsecrets.org/portal/administrator/index2.php?option=com_fireboard&task=showAdministration'

I tested it also with Safari explorer and Firefox and they all seem to have the same problem.

Does someone know how to solve this problem ?

Hans
