## badword component dosent work..

Posted by she - 2007/09/27 11:55

---

my badword filter doesnt work in fireboard..

i set the fireboard badword configuration Use bad words filtering = 'no' because wend i set to 'yes' the content of post cannot read..

The error occur because of any wrong with my installation of fireboard or badword filter ?

i really blur right now... :S

Do you actually have Badwords installed?

---

## Re:badword component dosent work..

Posted by FayeC - 2007/10/07 16:56

---

Yes.

Badword

Author: Pravin Hegde

Version: 1.0

Email: pravin@akuate.com

I found this on a Fireboard forum posting.

Is there any other that will work?

i think ur using the wrong one

try this...

[http://www.schoolastech.com/index.php?option=com\\_remository&Itemid=29&func=fileinfo&id=2](http://www.schoolastech.com/index.php?option=com_remository&Itemid=29&func=fileinfo&id=2)

hai i'm using badword2 filter and it work...

my problem is when i type a word such "god and bad in your life" become "god and \*\*\* in your life".

how to remove the filtering of the word bad?

---

word bad not added in Badwords List.

can anyone help me?? :(

Hi She,

I m also getting exact same problem as you. Can you please tell me how did you fix it?

Thnx

---

Whatever I do in Joomla admin panel I get this:

An Error Has Occurred! Unable to open config file to write!

:(

I've chmod'ed config files to 777. All files have Full Access for IUSR (Vista/IIS7.0/PHPx64/MySQLx64)

config.badwords2.admins.php

config.badwords2.regexp.php

config.badwords2.words.php

Did anyone solve this problem?????????????

Badword2, Fireboard 1.0.4 and Joomla 1.5.2

An Error Has Occurred! Unable to open config file to write!

I also did chmod 777 to all the badword2 configurations but doesn't seems to work at all.

Please help

Did you fix this I'm having the same issue.  
An Error Has Occurred! Unable to open config file to write!

Looking for a badwords component that works with the latest joomla and FB

I ended up using ReReplacer, it works perfectly. Never could get badwords2 to work properly.

[extensions.joomla.org/component/option,c...nk\\_id,4336/Itemid,35](http://extensions.joomla.org/component/option,c...nk_id,4336/Itemid,35)

Hi guys,  
I had this problem too, the one with An Error Has Occurred! Unable to open config file to write! huh :huh: finally after a few hours search, I found the solution, it is a require\_once problem.

in file admin.badwords2.php at line 25 there is a require\_once('settings.badwords2.perm.php');  
This file contains the variables regarding the config files for badwords, badregexp, etc.  
in the functions editBwRow(), saveBwRow(), showBwData(), removeBwData() comment out the line global \$bw\_file\_badwords, \$bw\_file\_admins, \$bw\_file\_regexp;, in each of this functions and add require\_once('settings.badwords2.perm.php');  
This worked for me. Now I see the list of the badwords, I can Edit and Save.
