## DB function failed with error number 1054

Posted by webtytte - 2007/05/15 15:27

---

I tried installing this in a clean Joomla 1.5 environment with no other components installed.

Legacy was turned on.

I choose a clean install and loaded sample data.

When I click "Forum Administration" I get this message:

DB function failed with error number 1054

```
Unknown column 'g.group_id' in 'on clause' SQL=SELECT a.*, a.name AS category, u.name AS editor, g.name AS
groupname, h.name AS admingroup FROM jos_fb_categories AS a LEFT JOIN jos_users AS u ON u.id = a.checked_out
LEFT JOIN jos_core_acl_aro_groups AS g ON g.group_id = a.pub_access LEFT JOIN jos_core_acl_aro_groups AS h
ON h.group_id = a.admin_access GROUP BY a.id ORDER BY a.ordering, a.name
```

Any clues?

Kind regards

Webtytte

Hi,

I met the same problem. In the database, I found that joomla1.5 had a field named by "id" in the table of jos\_core\_acl\_aro\_groups, whereas the field was called to "group\_id". So the problem came out. Now the problem need fixing neither by joomla1.5 new verion or by fireboard new verion.

Same problem here

It's al;so listed on the bug tracker

[http://joomlancode.org/gf/project/fireboard/tracker/?action=TrackerItemEdit&tracker\\_item\\_id=4800](http://joomlancode.org/gf/project/fireboard/tracker/?action=TrackerItemEdit&tracker_item_id=4800)

gerri28 wrote:

I think I have solved this issue, at least it seems to work for me.

It has been a slight change in table structure in Joomla 1.5, and the legacy support for mosTreeRecurse dosen't seem to work correctly or at least not for Fireboard.

extract attatched file to: /administrator/components/com\_fireboard

can you tell me what you did with the file?

I uploaded it to the exact location through smartftp but it didnt fix the problem...thanks =)

---

all I did was copy the extracted file to the location they specified.

I have direct access to my server so it was no big deal... no ftp for me. You might do a diff on the file to make sure that it made it ok - if you can log in to your server.

Hey Thanks!!

I have just noticed that I copied the file to a wrong location.  
it's working now, yay!

Does anyone have an update on this issue? Downloading and installing the zip mentioned (in thread below) did not do anything, perhaps it's now been superseded?

I installed Joomla 1.5 with CB 1.0.2, then Fireboard - did the "clean install" database thing, but still got this error message. I've seen the error on other forums, no-one has posted a thread!

---

## Re:DB function failed with error number 1054

---

I've now done this on two different site installations, with the same error message, and the same inability to apply the suggested patch. Help please!

---

Cough cough, ahem, I've since realised there are two component directories, one in the root and one under /administrator/...you can guess which one I had uploaded to. Now all is clear, and all is working, and man does one have to re-read file paths carefully...Thanks...

Cough cough, um, now uploaded the file to "/administrator/components/com\_fireboard/" (not "/components/com\_fireboard/" and yes, IT WORKS! Yeah! Didn't see that little "administrator" at the start of the file path, made an assumption, ahem...

Unless you want to delete the menu section (on the left hand column) then i suggest amending the php file itself:

admin.fireboard.php

This can be found in \Joomla\administrator\components\com\_fireboard (if you installed joomla in a folder called "Joomla")

around line 382 (ish) you should make the following amendment:

```
$database->setQuery("SELECT a.*, a.name AS category, u.name AS editor, g.name AS groupname, h.name AS
admingroup"
. "\nFROM #__fb_categories AS a"
. "\nLEFT JOIN #__fb_categories AS b ON b.id = a.parent"
. "\nLEFT JOIN #__users AS u ON u.id = a.checked_out"
. "\nLEFT JOIN #__core_acl_aro_groups AS g ON g.group_id = a.pub_access"
. "\nLEFT JOIN #__core_acl_aro_groups AS h ON h.group_id = a.admin_access"
. "\n GROUP BY a.id"
. "\n ORDER BY a.ordering, a.name");
/*/what the code said before the edit below
// $database->setQuery("SELECT a.*, a.name AS category, u.name AS editor, g.name AS groupname, h.name AS
admingroup"
. "\nFROM #__fb_categories AS a"
. "\nLEFT JOIN #__users AS u ON u.id = a.checked_out"
. "\nLEFT JOIN #__core_acl_aro_groups AS g ON g.".(FBTools::isJoomla15())?"":"group_")."id = a.pub_access"
. "\nLEFT JOIN #__core_acl_aro_groups AS h ON h.".(FBTools::isJoomla15())?"":"group_")."id = a.admin_access"
. "\n GROUP BY a.id"
. "\n ORDER BY a.ordering, a.name");*/
```

Its caused me some problems one way or another, why can't fire board get rid of bugs to begin with!?
