
Ninja Chooser - FB themechooser module for J 1.5!

Posted by TipsogTriks - 2008/05/07 05:07

We at Ninjoomla (soon to be released and renamed NinjaForge) liked the original fb templatechooser. But it wasn't in a 1.5 version.

The good news is that we weren't satisfied by making it 1.5 native. We also assured it worked with FB 1.0.4 and FB 1.1 Alpha as well as the latest Joomla version, 1.5.3.

We also added a param for the button text, instead of adding text in the FB language files. And made it xhtml and css valid.

Did I mention it is FREE?

Get it while it's hot!
