
[SOLVED]Creating new ranks

Posted by thadley - 2008/05/08 04:21

Hello-
I need some help. I can't seem to figure out how to add additional ranks to my existing rank system. I have the default Fireboard rankings (fresh boarder, junior boarder, etc.), but I would like to add a few more ranking options. I've searched this forum and have found nothing addressing this... can anyone help? Even if I could get my hands on a PSD file of current FB rank images, I could manipulate it and create new ones.

I did try to upload a random new image and assigned the rank to myself, but no luck in getting the sizing right and the image to show up.

Thanks in advance.

Tara

Still hoping for a simple solution to adding additional ranks to my forums... anybody?! Or does everyone just go with the ranks that are provided in Fireboard?? Seems unlikely. Help please! :dry:

No luck here? I would like to change the title of my "ranks" also, I have scoured my php and css files for FB with no results. Anybody out there know where to edit the image or text file for this?

Thank You!

:huh:? there are not many easier things to manage :P

site/administrator introduce user+pass
components->fireboard->rank management
new rank->insert details->save
done

To add new images, you have to upload them to your template and language folder rank image:
root/components/com_fireboard/template/"templatename"/images/"language"/ranks
