
Invalid forum post links

Posted by webstudent - 2007/10/11 18:57

In Joomla 1.5 legacy mode with sef enabled, a few forum post lists have invalid post-links.

Example 1: recentposts.php

```
$link = sefRelToAbs("index.php?option=com_fireboard&func=view&id=$row->fbid" . "&catid=$row->catid#$row->fbid");
```

generates a wrong link. The problem is fixed by moving the anchor out of the sefRelToAbs function:

```
$link = sefRelToAbs("index.php?option=com_fireboard&func=view&catid=$row->catid" . "&id=$row->fbid")."#$row->fbid";
```

Example 2: forummsg.php

```
$fbURL = sefRelToAbs("index.php?option=com_fireboard&func=view".FB_FB_ITEMID_SUFFIX."&catid=" . $item->catid . "&id=" . $item->id . "#" . $item->id);
```

does not work, but

```
$fbURL = sefRelToAbs("index.php?option=com_fireboard&func=view".FB_FB_ITEMID_SUFFIX."&catid=" . $item->catid . "&id=" . $item->id) . "#" . $item->id;
```

does.

In recentposts.php the correct line is:

```
$link = sefRelToAbs("index.php?option=com_fireboard&func=view&catid=$row->catid" . "&id=$row->fbid")."#$row->fbid";
```
