
User Registration - 403 Error

Posted by aimeeabbott - 2008/02/15 20:06

Greetings,

I just installed the forum and love the options and features! However, when you click on "Register" for a new registration a 403 - Access Forbidden page comes up in response. Is this a permissions issue or some setting I need to look into?

I need to be able to allow new registrations! Has anyone come across this problem and found a solution?

Advance Thanks!

I am having this same problem, but I do not understand where to look for this setting. You mention the User Registration but is this a module I'm looking for, a section in Fireboards configuration, or somewhere else?

I am using Joomla 1.5 and the latest version of Fireboard. If someone could clarify with more details for a dummy, it would be greatly appreciated!

Hi!

The setting is in the Joomla! Admin under Global Configuration -> System -> User Settings -> Allow User Registration. Check the "Yes".

Hope this helps!

Sorry for bringing this up again, but my issue are similar.

I also get the 403 and that's the way it should be. Don't allow user registration.

But how to not show the links to Login and Register?

Re:User Registration - 403 Error
