
Fatal Error when submitting a post - Solved

Posted by dfrench - 2008/06/16 18:43

The FireBoard_1.0.4_Stable_PatchFiles.zip solved this issue.

Hi, I have just installed fb 1.0.4 on my joomla 1.5.3 test site. I had a bit of trouble installing it and ended up copying the files to the correct areas and then running administrator/index.php?option=com_fireboard&task=installfb which seemed to be successful. I have setup the categories but when I try to submit a new post i receive this error:

Fatal error: Call to undefined function: fbgetinternaltime() in
/home/gulvalafc/4XTTB0N6/htdocs/2008_2009/components/com_fireboard/template/default/post.php on line 203

Does anybody know how to fix this error?

Thanks,

Dan.
