
How can we open new thread?

Posted by wallace740 - 2008/05/23 12:17

I installed FB en created the section/categories
User registration and everything works but i couldnt find the place to open new threads?
That button is nowhere
Help

Of course I'm logged in while trying to open a forum
but still there are no buttons for that

Ok I solved the problem
It was because I was trying to open a new thread right under the Forum Category.
It needs at least 1 subcategory(child group):side:

I have the same problem.. with child categories...

Post a new thread is impossible !

My forum are open, publics, with any restriction, no moderation, etc.

But, how can I create a new category? The instruction says:

"Please note: To create a Category, choose 'Top Level Category' as a Parent."

However the 'Top Level Category' does not show up. The only option for Parent is 'No Parent'!! What should I do?

OK, now. I created a first fórum/category and it was considered a category, in spite of the instruction. Now I have other problems:

- 1) When I ftry to add an annoucement, as administrator I get an error message: "Hacking attempt"
- 2) My forum appears embeded in my front page. It doesn't help to choose New Window in the FireBoard menu.

Hi Paulo,

I'm having the SAME problem! I just installed Fireboard for J 1.5.3 and says to use Top Level Catagorie. I then tried creating a Catagory using Joomla (thinking that is the only OTHER place I could possibly add a Catagory and make this work) but that did NOT help.

Did you figure it out or get help?

:unsure:

I'm having the exact same problem. Cannot create categories from FB admin.

:huh: Same problem here! Nothing seems to work. We are not computer experts but need to moderate and organise a simple forum that people can add new threads/topics/comments to. PLEASE someone help!and no jargon !

The only way we can get it to work is if we use a sample forum but that's not what we want. We're going to keep trying, and looking on this site.

Hi! I'm also interested in this issue.

Here is my client's forum: http://theresident.net/index.php?option=com_fireboard&Itemid=133&func=latest

I have it set that it shows All discussions. The client only wants 1 forum and no sub forums, so all threads go to General Discussion.

I want to be able to post a new thread directly to General Discussion from the Forum home page.
