
Set My Avatar - Profilebox (BUG FIX)

Posted by Legoland - 2007/05/30 02:46

SET MY AVATAR (PROFILEBOX) BUG FIX

PROBLEM: EXCESS OF TABLE TAGS, MESSING UP WITH THE SITE TEMPLATE.

SOLUTION: REMOVE BOTH OF THE CODE BELOW.

LOCATION: components/com_fireboard/template/default/

FILE: avatar_upload.php

LINES: 58-61

CODE:

and

LINES: 327-330

CODE:

Keep on the good work guys.

Legoland.

P.S. The code insertion is NOT working (Good Lord... 7 tries and nothing!!! Come on!!)

table, td tr tag is a problem with code posting.

But I think profilebox doesn't have I problem.

Thanks..

Just test:

```
// Dont allow direct linking
```

```
defined('_VALID_MOS') or die('Direct Access to this location is not allowed.');
```

```
//first we gather some information about this person
```

```
$database->setQuery("SELECT * FROM #__fb_users as su"
```

```
    . "\nLEFT JOIN #__users as u on u.id=su.userid WHERE su.userid=$my->id"«Â»);
```

```
$userDetails = $database->loadObjectList();
```

```
$user = $userDetails;
```

```
$preview = $user->view;
```

```
$username = $user->name;
```

```
$moderator = $user->moderator;
```

```
$fbavatar = $user->avatar;
```

```
,  
  
    | |  
id, $user_fields) || $my->usertype == 'Administrator' || $my->usertype == 'Super Administrator') {  
    $is_editor = true;  
}  
else {  
    $is_editor = false;  
}  
  
if ($is_editor) {  
$annlink = 'index.php?option=com_fireboard&func=announcement&do=show'.FB_FB_ITEMID_SUFFIX;  
  
?>
```

So whats the solution on this?...i tried to delete the tags tr/td/table and it and it works ok. But problem with this solution is that when you have modules turned on at the same page they get a different position...but atleast the template dosent break. Ithink this is something the developers should make a hot fix for, for such an obvious flaw?.

table, td tr tag is a problem with code posting.
But I think profilebox doesn't have I problem.

Awnser:

The profile box is just fine... I was only pointing the location to 'Set My Avatar'.

So whats the solution on this?...i tried to delete the tags tr/td/table and it and it works ok. But problem with this solution is that when you have modules turned on at the same page they get a different position...but atleast the template dosent break. Ithink this is something the developers should make a hot fix for, for such an obvious flaw?.

Awnser:

As you said this solution works. I haven't tried to run the component with another module published, but I'm going to take a look to see what's going on.

Could please tell me what module are you running with the forum component?

And I really won't mind if the developers want to take this bug and make a 'hot fix' for it, in fact, I would be glad.

Legoland.

Hi lego

I use registration, sections, and latest topics for forum. They are all activated in the right side. Do you also have problems with the Re-Direct function when a avatar is selected?

Cheers
bman

On my site, I get an internal server error when you attempt to set the avatar. I can not seem to understand the fix you are suggesting here. Can you be more specific in your explanantion of this fix. Thank you.
