---

The danich translation for 1.0.1 can be found here:

[http://joomlancode.org/gf/project/danish/frs/?action=FrsReleaseBrowse&frs\\_package\\_id=253](http://joomlancode.org/gf/project/danish/frs/?action=FrsReleaseBrowse&frs_package_id=253)

It includes a set of translated default icons too.

Hej there,

installed the danish package - works, BUT the smileys doesn't (don't appear), just when i switch to english they work. Allready checked read-write-acces, has nothing to do with that!

Hilsen, Ole (walaw)

Well that's odd - the emoticons are showing just fine at my site, and you're shure that you have installed all files from the zipped file?

Hmmm... i just copied all files again - now it works fine again....

It worked before but some days ago it didn't - now after copying all files again, it does work again... dont get it. As if there is something (joomlascript?) which overrides the read-permissions. I have NOT activated CHMOD in the Admin-panel.

I'll get back if this problem appears again.

Thanx so far for disturbing you with at least nothing ;)

Regards, Ole

Hi,

---

I have a "standard" danish problem. It concerns the characters æ ø å, which don't show properly!

Is it possible to define something like: `$lang_charset = 'da_DK.ISO8859-1'`; somewhere?

Any help will be greatly appreciated

/Jacob
